## Changes to portfolio holdings\*

In: BANCO BPM SPA (4.2)

Out: ASSYSTEM (6.1), CARBIOS (4.1), ESKER SA (7.2), ICADE (7.2), JCDECAUX SE (6.2), NEXANS SA (5.5), OVH GROUPE SAS (4.9) and VERALLIA (5.8)

\*The figure between brackets represents the issuer's 'responsibility' score. Please refer to the Internal Extra-financial analysis page for the analysis methodology.

### Portfolio managers comments

The CAC Mid&small index gained 8.01% in October. Share prices continue to be driven more by macroeconomic expectations (high inflation, risk of recession) than by earnings. Until 12 October, long rates rose, which weighed on equities; then they stabilised, then fell, dragging down equity indices. In view of the poor leading economic indicators, investors anticipated a slowdown in the rate hike. They were too pessimistic, which accentuated the rebound in equities. Earnings reports in Europe were decent, helped by the rise in the dollar (up 16% year-on-year against the euro), but there were many profit warnings. The panic over UK rates was calmed by the premature change of Prime Minister. The arrival of Gorgia Meloni as Prime Minister in Italy and his conciliatory statements reassured the markets (Msci Italy small cap index +10.7%).

Cyclically sensitive stocks (Industrials +10.3%, Commodities +12.1%, Energy +8.5%) and Communications (+10.6%) outperformed, while defensive sectors (Healthcare +3.4%, Real Estate +5%) underperformed.

We sold OVH, because the model is capital intensive and the company is in debt; real estate is sensitive to rising interest rates, so we took out the Icade line. We also sold Nexans because the results were disappointing. As part of the merger with the small cap Euro fund, we sold the least liquid stocks in the portfolio.

The monthly performance is : 6.89% to be compared with the benchmark 8.01%, i.e. a relative performance of -113 bp.

The main positive contributors are : Rexel (+17%), Technip Energies (+12.5%), CGG (+19.8%), Séché (+13.6%), Equasens (+16.7%), Trigano (+14.3%).

The main negative contributors are : Nacon (-37%, shift of a major video game to the next financial year), Remy Cointreau (-9.3%), Metropole TV (-15%), Aures (-13%), Catana (-9.8%).

The war in Ukraine will last a long time and Europe is likely to suffer an energy shock this winter and possibly next year. European industry will probably have to relocate energy-intensive factories; economic growth will slow down and budget deficits will increase; in this context, the themes that seem to us to be the most promising in the months to come are health, unsustainable consumption, energy (and especially renewable energy) and armaments

We will continue to optimise the portfolio for the most favourable mix of quality stocks (which generally have the power to push through inflationary price rises), with prospects for profit improvement and reasonable valuations.

## Internal extra-financial analysis

### ABA coverage rate<sup>+</sup> (99.5%)

Average Responsibility Score: 5.4/10

### Responsibility risk breakdown<sup>(1)</sup>

### Selectivity universe exclusion rate

### Transition/CSR exposure<sup>(2)</sup>

### SDG's exposure<sup>(3)</sup> (% of revenues)

### Sustainable transitions exposure<sup>(4)</sup>

## Analysis methodology

We develop proprietary models based on our expertise and conviction to add tangible value in the selection of portfolio securities. DNCA's ESG analysis model, Above & Beyond Analysis (ABA), respects this principle and offers a rating that we control the entire construction. Information from companies is the main input to our rating. The methodologies for calculating ESG indicators and our responsible investor and engagement policy are available on our website [by clicking here](#).

<sup>(1)</sup> The rating out of 10 integrates 4 risks of responsibility: shareholder, environmental, social and societal. Whatever their sector of activity, 24 indicators are evaluated, such as social climate, accounting risks, suppliers, business ethics, energy policy, quality of management.

<sup>(2)</sup> The ABA Matrix combines the Responsibility Risk and the Sustainable Transition exposure of the portfolio. It allows us to map companies to be mapped using a risk/opportunity approach.

<sup>(3)</sup> 1 No poverty. 2 Zero hunger. 3 Good health and well-being. 4 Quality education. 5 Gender equality. 6 Clean water and sanitation. 7 Clean and affordable energy. 8 Decent work and economic growth. 9 Industry, innovation and infrastructure. 10 Reduced inequalities. 11 Sustainable cities and communities. 12 Sustainable consumption and production. 13 Tackling climate change. 14 Aquatic life. 15 Terrestrial life. 16 Peace, justice and effective institutions. 17 Partnerships to achieve the goals.

<sup>(4)</sup> 5 transitions based on a long-term perspective of the financing of the economy allow the identification of activities with a positive contribution to sustainable development and to measure the exposure of companies in terms of turnover as well as exposure to the UN Sustainable Development Goals.

\*The coverage rate measures the proportion of issuers (equities and corporate bonds) taken into account in the calculation of the extra-financial indicators. This measure is calculated as a % of the fund's net assets adjusted for cash, money market instruments, derivatives and any vehicle outside the scope of "listed equities and corporate bonds". The coverage rate of the portfolio and the benchmark is identical for all indicators presented.

Source : Scope (Scoperating)

\* For each indicator, indicative total annual global cost of negative externalities by source. For example, the negative externalities of annual global water consumption represent a cost of USD 2.2 trillion.  
 The transition between the intermediate data and the total cost is achieved by assigning a unit negative externality cost per euro of turnover achieved. For example, a portfolio that emits 1 kg of CO<sub>2</sub> per euro of turnover at a cost of 40 euros per tonne of CO<sub>2</sub> has a negative externality cost of 4 cents.

## Administrative information

**Name:** DNCA Actions Small & Mid Cap France

**ISIN code (Share MC):** FR0010674499

**SFDR classification:** Art.8

**Cut off:** 12:30 Paris time

## Legal information

This is an advertising communication. Please refer to the Fund's Prospectus and Key Investor Information Document before making any final investment decision. This document is a promotional document for use by non-professional clients within the meaning of the MIFID II Directive. This document is a simplified presentation tool and does not constitute an offer to subscribe or investment advice. The information presented in this document is the property of DNCA Finance. It may not be distributed to third parties without the prior consent of DNCA Finance. The tax treatment depends on the situation of each, is the responsibility of the investor and remains at his expense. The DICI and the prospectus must be given to the investor, who must read them prior to any subscription. All the regulatory documents of the sub-fund are available free of charge on the website of the management company [www.dnca-investments.com](http://www.dnca-investments.com) or on written request to [dnca@dnca-investments.com](mailto:dnca@dnca-investments.com) or directly to the registered office of the company 19, Place Vendôme - 75001 Paris. Investments in the sub-fund entail risks, in particular the risk of loss of capital resulting in the loss of all or part of the amount initially invested. DNCA Finance may receive or pay a fee or retrocession in relation to the sub-fund(s) presented. DNCA Finance shall in no event be liable to any person for any direct, indirect or consequential loss or damage of any kind whatsoever resulting from any decision made on the basis of information contained in this document. This information is provided for information purposes only, in a simplified manner and may change over time or be modified at any time without notice.

Past performance is not a reliable indicator of future performance.

Sub-fund of DNCA INVEST Investment company with variable capital (SICAV) under Luxembourg law in the form of a Société Anonyme - domiciled at 60 Av. J.F. Kennedy - L-1855 Luxembourg. It is authorised by the Commission de Surveillance du Secteur Financier (CSSF) and subject to the provisions of Chapter 15 of the Law of 17 December 2010.

This product promotes environmental or social characteristics, but does not have as its objective a sustainable investment. It might invest partially in assets that have a sustainable objective, for instance qualified as sustainable according to the EU classification.

This product is subject to sustainability risks as defined in the Regulation 2019/2088 (article 2(22)) by environmental, social or governance event or condition that, if it occurs, could cause an actual or a potential material negative impact on the value of the investment.

If the portfolio investment process can incorporate ESG approach, the portfolio's investment objective is not primarily to mitigate this risk. The sustainability risk management policy is available on the website of the Management Company.

The reference benchmark as defined in the Regulation 2019/2088 (article 2(22)) does not intend to be consistent with the environmental or social characteristics promoted by the fund.

## Glossary

**Beta.** Measures the average extent to which a fund moves relative to the broader market. The beta of a market is 1. A fund with a beta of more than 1 moves on average to a greater extent than the market. A fund with a beta of less than 1 moves on average to a lesser extent. If beta is a minus number, it is likely that the stock and the market move in opposite directions.

**Correlation coefficient.** The correlation coefficient is a measure of correlation. It is used to determine the relationship between two assets over a given period. A positive coefficient means that the two assets move in the same direction. Conversely, a negative coefficient means that the assets move in the opposite direction. The correlation or decorrelation can be more or less strong and varies between -1 and 1.

**Derivatives.** The collective name used for a broad class of financial instruments that derive their value from other underlying financial instruments. Futures, options and swaps are all types of derivative.

**Maturity.** The time when a bond or other debt instrument is due for redemption (is due to mature); or the length of time between the issue of such an instrument and the date it is due for redemption (the maturity date).

**Sensitivity.** The sensitivity of a bond measures the change in its percentage value induced by a given change in interest rates.

**Sharpe Ratio.** A way of measuring the historical risk-adjusted return on an investment. It is the average previous return minus the risk-free return, divided by the standard deviation (a measure of risk that looks at the diversion of actual returns from expected returns).

**Sharpe Ratio.** The Sharpe ratio measures the excess return over the risk-free money rate of an asset portfolio divided by the standard deviation of that return. It is therefore a measure of the marginal return per unit of risk. It is used to measure the performance of managers with different risk policies.

**Tracking error.** Tracking Error is a measure of how closely an investment portfolio follows the index against which it is benchmarked. It is the difference in the return earned by a portfolio and the return earned by the benchmark against which the portfolio is constructed. For example, if a bond portfolio earns a return of 5.15% during a period when the portfolio's benchmark (say, for example, the Lehman Brothers Index) produces a return of 5.06%, the tracking error is .09%, or 9 basis points.

## Additional notes

This material has been provided for information purposes only to investment service providers or other Professional Clients, Institutional Investors, or Qualified or non- Qualified Investors in Switzerland, and, when required by local regulation, only at their written request.
