

DNCA EVOLUTIF PEA

FLEXIBLE

Investment objective

The Fund's performance objective is to outperform the benchmark STOXX EUROPE 600 (75%) and €STR (25%) calculated dividends reinvested and denominated in euro over the recommended investment period (5 years), notably by selecting stocks meeting socially responsible investment criteria.

To achieve its investment objective, the investment strategy is based on active discretionary management.

Portfolio managers comments

After 2 months of gains, European markets ended the month down -4.18% for the STOXX 600. In the United States, the main indices underperformed, with the Nasdaq (-7.69%) and S&P500 (-5.75%) posting their biggest quarterly declines in three years and the worst performance relative to global equities in over 15 years.

The markets were penalized by the numerous announcements from Donald Trump that he would be implementing tariffs as early as April 2, fuelling concerns about an intensification of the trade war. This uncertainty is beginning to spread to the real economy, with consumer sentiment at a 12-year low.

At the same time, geopolitical uncertainty linked to the war in Ukraine and difficulties in reaching an agreement contributed to investor caution.

In the very short term, the tariff announcements will be crucial for all the world's financial markets, all the more so as macro data point to a slight economic cooling, but not to the onset of recession.

The results season could also have an impact on the market, with possible cautious guidance given the uncertainties surrounding world trade.

Against this uncertain backdrop, we have lowered our net equity exposure to 90.09%, while strengthening certain defensive and less cyclical sectors such as telecoms, pharmaceuticals, medtech (Fresenius) and defense (Leonardo, Thales, Renk and Exosens), which should benefit from European stimulus plans.

Our positive contributors to performance include the defense sector with Leonardo, Munich Re and KPN in defensive, cash-flow-generating sectors such as reinsurance and telecoms.

Our three main detractors are ASML (impact of the price war), CRH and the luxury goods sector with LVMH.

Internal extra-financial analysis

ABA coverage rate⁺ (97.9%)

Average Responsibility Score: 5.3/10

Responsibility risk breakdown⁽¹⁾

Transition/CSR exposure⁽²⁾

SDG's exposure⁽³⁾ (% of revenues)

Sustainable transitions exposure⁽⁴⁾

Analysis methodology

We develop proprietary models based on our expertise and conviction to add tangible value in the selection of portfolio securities. DNCA's ESG analysis model, Above & Beyond Analysis (ABA), respects this principle and offers a rating that we control the entire construction. Information from companies is the main input to our rating. The methodologies for calculating ESG indicators and our responsible investor and engagement policy are available on our website [by clicking here](#).

⁽¹⁾ The rating out of 10 integrates 4 risks of responsibility: shareholder, environmental, social and societal. Whatever their sector of activity, 24 indicators are evaluated, such as social climate, accounting risks, suppliers, business ethics, energy policy, quality of management.

⁽²⁾ The ABA Matrix combines the Responsibility Risk and the Sustainable Transition exposure of the portfolio. It allows us to map companies to be mapped using a risk/opportunity approach.

⁽³⁾ **1** No poverty. **2** Zero hunger. **3** Good health and well-being. **4** Quality education. **5** Gender equality. **6** Clean water and sanitation. **7** Clean and affordable energy. **8** Decent work and economic growth. **9** Industry, innovation and infrastructure. **10** Reduced inequalities. **11** Sustainable cities and communities. **12** Sustainable consumption and production. **13** Tackling climate change. **14** Aquatic life. **15** Terrestrial life. **16** Peace, justice and effective institutions. **17** Partnerships to achieve the goals.

⁽⁴⁾ 5 transitions based on a long-term perspective of the financing of the economy allow the identification of activities with a positive contribution to sustainable development and to measure the exposure of companies in terms of turnover as well as exposure to the UN Sustainable Development Goals.

*The coverage rate measures the proportion of issuers (equities and corporate bonds) taken into account in the calculation of the extra-financial indicators. This measure is calculated as a % of the net assets adjusted for cash, money market instruments, derivatives and any vehicle outside the scope of "listed equities and corporate bonds".

It should be noted that DNCA Finance changed its non-financial data provider in October 2023 from monitoring negative externalities by the Scope Rating provider to monitoring performance indicators (PAI) by the MSCI provider. This change of supplier and indicator typology prevents DNCA Finance from producing a 3-year ESG performance comparison. DNCA Finance Committed to produce this historical data from the data available in December 2023.

A summary of investors' rights is available in English at the following link: <https://www.dnca-investments.com/en/regulatory-information>

This product promotes environmental or social characteristics, but does not have as its objective a sustainable investment. It might invest partially in assets that have a sustainable objective, for instance qualified as sustainable according to the EU classification.

This product is subject to sustainability risks as defined in the Regulation 2019/2088 (article 2(22)) by environmental, social or governance event or condition that, if it occurs, could cause an actual or a potential material negative impact on the value of the investment.

If the portfolio investment process can incorporate ESG approach, the portfolio's investment objective is not primarily to mitigate this risk. The sustainability risk management policy is available on the website of the Management Company.

The reference benchmark as defined in the Regulation 2019/2088 (article 2(22)) does not intend to be consistent with the environmental or social characteristics promoted by the fund.

Glossary

Beta. Measures the average extent to which a fund moves relative to the broader market. The beta of a market is 1. A fund with a beta of more than 1 moves on average to a greater extent than the market. A fund with a beta of less than 1 moves on average to a lesser extent. If beta is a minus number, it is likely that the stock and the market move in opposite directions.

Convertible Bond. Hybrid securities that have both bond and equity characteristics. Convertible bonds make periodic interest payments like a bond, but bondholders also get an option to exchange their bonds for a specified number of shares of common stock. Convertible bonds typically carry lower coupon rates, thus reducing the corporation's cost of borrowing.

Correlation coefficient. The correlation coefficient is a measure of correlation. It is used to determine the relationship between two assets over a given period. A positive coefficient means that the two assets move in the same direction. Conversely, a negative coefficient means that the assets move in the opposite direction. The correlation or decorrelation can be more or less strong and varies between -1 and 1.

Delta. The delta of a position expresses the change in the price of an option when its underlying asset price varies. It corresponds to the derivative of the theoretical value of the option relating to the price of the underlying asset.

Maturity. The time when a bond or other debt instrument is due to for redemption (is due to mature); or the length of time between the issue of such an instrument and the date it is due for redemption (the maturity date).

Sensitivity. The sensitivity of a bond measures the change in its percentage value induced by a given change in interest rates.

Sharpe Ratio. A way of measuring the historical risk-adjusted return on an investment. It is the average previous return minus the risk-free return, divided by the standard deviation (a measure of risk that looks at the diversion of actual returns from expected returns).

Sharpe Ratio. The Sharpe ratio measures the excess return over the risk-free money rate of an asset portfolio divided by the standard deviation of that return. It is therefore a measure of the marginal return per unit of risk. It is used to measure the performance of managers with different risk policies.

Tracking error. Tracking Error is a measure of how closely an investment portfolio follows the index against which it is benchmarked. It is the difference in the return earned by a portfolio and the return earned by the benchmark against which the portfolio is constructed. For example, if a bond portfolio earns a return of 5.15% during a period when the portfolio's benchmark (say, for example, the Lehman Brothers Index) produces a return of 5.06%, the tracking error is .09%, or 9 basis points.
