

DNCA INVEST ARCHER MID-CAP EUROPE

EUROPEAN MID-CAP EQUITIES

Investment objective

The Sub-Fund seeks to achieve superior long term risk adjusted returns (i.e. returns adjusted for volatility) by investing primarily in equities and equity related securities of medium sized and smaller European companies over the recommended investment term (five years). Investors' attention is drawn to the fact that the management style is discretionary and integrates environmental, social / societal and governance (ESG) criteria. The portfolio composition will not attempt to replicate the composition of a benchmark index from a geographical or sectorial perspective. Even so, MSCI EUROPE MID CAP Net Return Euro Index may be used as an ex-post benchmark indicator.

To achieve its investment objective, the investment strategy is based on active discretionary management.

Portfolio managers comments

The fund invests in the attractive European mid-cap segment.

Our aim is to find the best value for money: in other words, to own companies with excellent fundamentals and solid prospects, while remaining rigorous in terms of valuation.

Since its creation, the fund has outperformed its benchmark 1.63% against -3.8%.

Among the companies that contributed most to the fund's performance in March 2024 were Fugro (Leader in geotechnical engineering), which reported good 2023 results and secured a major marine survey contract with the INPEX group for the Abadi Liquefied Natural Gas project in Indonesia. D'leteren (Automobiles and Parts) and AIB (Banking and Financial Services) contributed to the performance thanks to the publication this month of solid results for 2023. Renk (Defence and Aerospace) performed well thanks to its 2023 results and solid growing demand for the defence sector in a tense geopolitical context. Finally, 3I Group once again made a positive contribution to the fund's performance, thanks to good results in 2023 and a very good Momentum at the start of 2024, thanks in particular to its main asset, the discounter Action.

Among those that contributed least to the fund's performance were Dermapharm (Pharmaceuticals), which published disappointing results, below consensus. The share price of Flutter Entertainment (online gambling and betting) was weakened by potential new unfavourable regulatory constraints, despite the company's good results. GTT (naval engineering company) suffered from the withdrawal of Engie from its shareholding, despite good results and a strong order book. Brenntag (distribution of chemical products) is taking a cautious approach to the current year, after posting a fall in sales and profits last year. Finally, Barco (projection and digital imaging technologies) saw its share price fall for no particular reason.

Adjustments have been made to the portfolio as we continue to optimise it to achieve the most favourable combination of quality, improved prospects and valuation.

Internal extra-financial analysis

ABA coverage rate⁺ (95.1%)

Average Responsibility Score: 4.8/10

Responsibility risk breakdown⁽¹⁾

SDG's exposure⁽³⁾ (% of revenues)

Selectivity universe exclusion rate

Transition/CSR exposure⁽²⁾

Sustainable transitions exposure⁽⁴⁾

Analysis methodology

We develop proprietary models based on our expertise and conviction to add tangible value in the selection of portfolio securities. DNCA's ESG analysis model, Above & Beyond Analysis (ABA), respects this principle and offers a rating that we control the entire construction. Information from companies is the main input to our rating. The methodologies for calculating ESG indicators and our responsible investor and engagement policy are available on our website [by clicking here](#).

⁽¹⁾ The rating out of 10 integrates 4 risks of responsibility: shareholder, environmental, social and societal. Whatever their sector of activity, 24 indicators are evaluated, such as social climate, accounting risks, suppliers, business ethics, energy policy, quality of management.

⁽²⁾ The ABA Matrix combines the Responsibility Risk and the Sustainable Transition exposure of the portfolio. It allows us to map companies to be mapped using a risk/opportunity approach.

⁽³⁾ 1 No poverty. 2 Zero hunger. 3 Good health and well-being. 4 Quality education. 5 Gender equality. 6 Clean water and sanitation. 7 Clean and affordable energy. 8 Decent work and economic growth. 9 Industry, innovation and infrastructure. 10 Reduced inequalities. 11 Sustainable cities and communities. 12 Sustainable consumption and production. 13 Tackling climate change. 14 Aquatic life. 15 Terrestrial life. 16 Peace, justice and effective institutions. 17 Partnerships to achieve the goals.

⁽⁴⁾ 5 transitions based on a long-term perspective of the financing of the economy allow the identification of activities with a positive contribution to sustainable development and to measure the exposure of companies in terms of turnover as well as exposure to the UN Sustainable Development Goals.

*The coverage rate measures the proportion of issuers (equities and corporate bonds) taken into account in the calculation of the extra-financial indicators. This measure is calculated as a % of the fund's net assets adjusted for cash, money market instruments, derivatives and any vehicle outside the scope of "listed equities and corporate bonds".

This product promotes environmental or social characteristics, but does not have as its objective a sustainable investment. It might invest partially in assets that have a sustainable objective, for instance qualified as sustainable according to the EU classification.

This product is subject to sustainability risks as defined in the Regulation 2019/2088 (article 2(22)) by environmental, social or governance event or condition that, if it occurs, could cause an actual or a potential material negative impact on the value of the investment.

If the portfolio investment process can incorporate ESG approach, the portfolio's investment objective is not primarily to mitigate this risk. The sustainability risk management policy is available on the website of the Management Company.

The reference benchmark as defined in the Regulation 2019/2088 (article 2(22)) does not intend to be consistent with the environmental or social characteristics promoted by the fund.

Glossary

Beta. Measures the average extent to which a fund moves relative to the broader market. The beta of a market is 1. A fund with a beta of more than 1 moves on average to a greater extent than the market. A fund with a beta of less than 1 moves on average to a lesser extent. If beta is a minus number, it is likely that the stock and the market move in opposite directions.

Correlation coefficient. The correlation coefficient is a measure of correlation. It is used to determine the relationship between two assets over a given period. A positive coefficient means that the two assets move in the same direction. Conversely, a negative coefficient means that the assets move in the opposite direction. The correlation or decorrelation can be more or less strong and varies between -1 and 1.

Dividend yield. Annual dividends per share / Price per share

EV (Enterprise Value). Market value of common stock + market value of preferred equity + market value of debt + minority interest - cash and investments.

ND/EBITDA (Net Debt / EBITDA). A measurement of leverage, calculated as a company's interest-bearing liabilities minus cash or cash equivalents, divided by its EBITDA. The net debt to EBITDA ratio is a debt ratio that shows how many years it would take for a company to pay back its debt if net debt and EBITDA are held constant.

P/B. The Price to Book Ratio is the ratio of the market value of equity (market capitalisation) to its book value. It is used to compare the market valuation of a company with its book value.

P/CF (Share price/Cash Flow per Share). The price-to-cash-flow ratio is an indicator of a stock's valuation.

PER (Price Earnings Ratio). A company's share price divided by the amount of profits it makes for each share in a 12-month period. PE ratios are normally calculated on the base of all the profit made in the period, whether or not the profit is paid out to shareholders in that period.

ROE (Return On Equity). The amount of net income returned as a percentage of shareholders equity. Return on equity measures a corporation's profitability by revealing how much profit a company generates with the money shareholders have invested.

Sharpe Ratio. A way of measuring the historical risk-adjusted return on an investment. It is the average previous return minus the risk-free return, divided by the standard deviation (a measure of risk that looks at the diversion of actual returns from expected returns).

Sharpe Ratio. The Sharpe ratio measures the excess return over the risk-free money rate of an asset portfolio divided by the standard deviation of that return. It is therefore a measure of the marginal return per unit of risk. It is used to measure the performance of managers with different risk policies.

Tracking error. Tracking Error is a measure of how closely an investment portfolio follows the index against which it is benchmarked. It is the difference in the return earned by a portfolio and the return earned by the benchmark against which the portfolio is constructed. For example, if a bond portfolio earns a return of 5.15% during a period when the portfolio's benchmark (say, for example, the Lehman Brothers Index) produces a return of 5.06%, the tracking error is .09%, or 9 basis points.
