

# DNCA INVEST BEYOND CLIMATE

EUROPEAN EQUITIES SRI

## Investment objective

The Sub-Fund seeks to outperform of the following index denominated in Euro: Euro Stoxx NR (Bloomberg ticker: SXXT Index) calculated with dividends net of withholding taxes reinvested, over the recommend investment term. Investors' attention is drawn to the fact that the management style is discretionary and integrates environmental, social / societal and governance (ESG) criteria. The investment strategy is based on a climate strategy which combines the classic requirements of risk and financial return with the low carbon transition requirements in line with the Paris Agreement as signed on 22 April 2016 (the "Paris Agreement").

To achieve its investment objective, the investment strategy is based on active discretionary management.

## Financial characteristics

## Portfolio managers comments

The month of March was marked by a relative calm in terms of the statistics published, developments in geopolitical conflicts and corporate communications. The upward trend that began in October was only interrupted by a few rare instances of profit-taking in early January: the Stoxx 600 gained 6.9% over the quarter and 17.1% since the end of October. In March alone, it is still up 3.6%. This performance was made possible by a rebound in the value sectors, led by retail, banks, property, energy and basic resources. Conversely, Travel & Leisure and Technology are at the bottom of the league table. We believe that at these price levels, there is no room for disappointment if companies fail to deliver solid Q1 earnings, whereas the FY23 earnings season was an "average" year with (only) 71% of US companies beating earnings per share expectations. This figure falls to 50% in Europe, where earnings per share growth for this year was revised down by 40bp in March, from 4.5% to 4.1%. With regard to monetary policies, which have a major influence on portfolio performance, the main central banks (Fed, ECB, BoE) kept their key rates unchanged in March, but are preparing the ground for possible rate cuts in the months ahead. This catalyst remains a necessary condition for the rebound of a large proportion of the sectors invested in the portfolio.

In March, the fund posted a performance of 2.86%, compared with 4.52% for its Euro Stoxx benchmark index.

Over the month, the main relative outperformers in the portfolio (versus Euro Stoxx) were : Neoen (Ecological Transition, +24bps, asset weight +2.9%), Spie (Ecological Transition, +22bps, asset weight +2.8%) and Iberdrola (Ecological Transition, +17bps, asset weight +4.6%). Conversely, the worst performers in terms of performance were : STM (Ecological Transition, -48bps, assets +5.3%), Nibe (Ecological Transition, -48bps, assets +2.7%) and Dassault Systèmes (Medical and Lifestyle Transition, -39bps, assets +3.9%).

During the month, we took profits on Bureau Veritas, whose share price performance welcomed the annual results and Capital Market Day confirmed the positive medium to long-term trend for the group. Nevertheless, the stock is still one of the portfolio's Top 10 holdings, with an active weighting of over 5%, and remains a strong conviction.

At the end of the month, the portfolio comprised 35 stocks. The portfolio's main convictions remain unchanged, with the following top 5 stocks: Iberdrola (Ecological Transition, >5.5%), STMicroelectronics (Ecological Transition, >5%), Bureau Veritas (Economic Transition, >4.5%), Schneider Electric (Ecological Transition, >5.0%) and Dassault Systemes (Fashion and Medical Transition, >4.0%).

The environmental theme, particularly the renewable energies segment, continued to suffer in March, despite the marked rebound of a few specific players such as Neoen, Plastic Omnium and players in the wood industry in the Nordic countries (Stora Enso, SCA). We continue to believe that lower interest rates will act as a catalyst for a genuine rebound in this part of the portfolio, a rebound that began in part at the end of last year but was aborted at the start of this year due to a lack of solid results and visibility. The theme is experiencing an unprecedented capitulation, irrespective of the quality of the companies, and we need to take advantage of this to strengthen our strong convictions, which are now at valuation levels rarely reached. Portfolio exposure is now close to 98%.

### Selectivity universe exclusion rate

### Transition/CSR exposure<sup>(2)</sup>

### SDG's exposure<sup>(3)</sup> (% of revenues)

### Sustainable transitions exposure<sup>(4)</sup>

## Analysis methodology

We develop proprietary models based on our expertise and conviction to add tangible value in the selection of portfolio securities. DNCA's ESG analysis model, Above & Beyond Analysis (ABA), respects this principle and offers a rating that we control the entire construction. Information from companies is the main input to our rating. The methodologies for calculating ESG indicators and our responsible investor and engagement policy are available on our website [by clicking here](#).

<sup>(1)</sup> The rating out of 10 integrates 4 risks of responsibility: shareholder, environmental, social and societal. Whatever their sector of activity, 24 indicators are evaluated, such as social climate, accounting risks, suppliers, business ethics, energy policy, quality of management.

<sup>(2)</sup> The ABA Matrix combines the Responsibility Risk and the Sustainable Transition exposure of the portfolio. It allows us to map companies to be mapped using a risk/opportunity approach.

<sup>(3)</sup> 1 No poverty. 2 Zero hunger. 3 Good health and well-being. 4 Quality education. 5 Gender equality. 6 Clean water and sanitation. 7 Clean and affordable energy. 8 Decent work and economic growth. 9 Industry, innovation and infrastructure. 10 Reduced inequalities. 11 Sustainable cities and communities. 12 Sustainable consumption and production. 13 Tackling climate change. 14 Aquatic life. 15 Terrestrial life. 16 Peace, justice and effective institutions. 17 Partnerships to achieve the goals.

<sup>(4)</sup> 5 transitions based on a long-term perspective of the financing of the economy allow the identification of activities with a positive contribution to sustainable development and to measure the exposure of companies in terms of turnover as well as exposure to the UN Sustainable Development Goals.

\*The coverage rate measures the proportion of issuers (equities and corporate bonds) taken into account in the calculation of the extra-financial indicators. This measure is calculated as a % of the fund's net assets adjusted for cash, money market instruments, derivatives and any vehicle outside the scope of "listed equities and corporate bonds".

This Fund is being marketed as a public offering in Luxembourg. You can contact the DNCA Finance branch:

DNCA Finance Luxembourg Branch - 1 Place d'Armes - L-1136 Luxembourg

The Sub-Fund has as its objective sustainable investment within the meaning of Article 9 of SFDR. The Sub-Fund aims to align the economy on a path of at least 2 degrees. This objective is materialized by an average decrease of the portfolio carbon intensity of at least 2.5% each year by comparing the carbon intensity of each consolidated company in the Sub-Fund with the carbon intensity of the previous year. In addition, the investment strategy is oriented towards a contributive economy to the climate issues resulting in avoided CO2 emissions greater than the induced CO2 emissions (scope 1 and 2).

This product is subject to sustainability risks as defined in the Regulation 2019/2088 (article 2(22)) by environmental, social or governance event or condition that, if it occurs, could cause an actual or a potential material negative impact on the value of the investment.

If the portfolio investment process can incorporate ESG approach, the portfolio's investment objective is not primarily to mitigate this risk. The sustainability risk management policy is available on the website of the Management Company.

The reference benchmark as defined in the Regulation 2019/2088 (article 2(22)) does not include the environmental or social characteristics promoted by the fund.

## Glossary

**Beta.** Measures the average extent to which a fund moves relative to the broader market. The beta of a market is 1. A fund with a beta of more than 1 moves on average to a greater extent than the market. A fund with a beta of less than 1 moves on average to a lesser extent. If beta is a minus number, it is likely that the stock and the market move in opposite directions.

**Correlation coefficient.** The correlation coefficient is a measure of correlation. It is used to determine the relationship between two assets over a given period. A positive coefficient means that the two assets move in the same direction. Conversely, a negative coefficient means that the assets move in the opposite direction. The correlation or decorrelation can be more or less strong and varies between -1 and 1.

**Dividend yield.** Annual dividends per share / Price per share

**EV (Enterprise Value).** Market value of common stock + market value of preferred equity + market value of debt + minority interest - cash and investments.

**ND/EBITDA (Net Debt / EBITDA).** A measurement of leverage, calculated as a company's interest-bearing liabilities minus cash or cash equivalents, divided by its EBITDA. The net debt to EBITDA ratio is a debt ratio that shows how many years it would take for a company to pay back its debt if net debt and EBITDA are held constant.

**P/B.** The Price to Book Ratio is the ratio of the market value of equity (market capitalisation) to its book value. It is used to compare the market valuation of a company with its book value.

**P/CF (Share price/Cash Flow per Share).** The price-to-cash-flow ratio is an indicator of a stock's valuation.

**PER (Price Earnings Ratio).** A company's share price divided by the amount of profits it makes for each share in a 12-month period. PE ratios are normally calculated on the base of all the profit made in the period, whether or not the profit is paid out to shareholders in that period.

**ROE (Return On Equity).** The amount of net income returned as a percentage of shareholders equity. Return on equity measures a corporation's profitability by revealing how much profit a company generates with the money shareholders have invested.

**Sharpe Ratio.** A way of measuring the historical risk-adjusted return on an investment. It is the average previous return minus the risk-free return, divided by the standard deviation (a measure of risk that looks at the diversion of actual returns from expected returns).

**Sharpe Ratio.** The Sharpe ratio measures the excess return over the risk-free money rate of an asset portfolio divided by the standard deviation of that return. It is therefore a measure of the marginal return per unit of risk. It is used to measure the performance of managers with different risk policies.

**Tracking error.** Tracking Error is a measure of how closely an investment portfolio follows the index against which it is benchmarked. It is the difference in the return earned by a portfolio and the return earned by the benchmark against which the portfolio is constructed. For example, if a bond portfolio earns a return of 5.15% during a period when the portfolio's benchmark (say, for example, the Lehman Brothers Index) produces a return of 5.06%, the tracking error is .09%, or 9 basis points.
