

DNCA INVEST BEYOND GLOBAL LEADERS

GLOBAL EQUITIES SRI

Investment objective

The Sub-Fund seeks to outperform the MSCI All Countries World Index Net Return (Euro) on the recommended investment term. Investors' attention is drawn to the fact that the management style is discretionary and integrates environmental, social / societal and governance (ESG) criteria.

To achieve its investment objective, the investment strategy is based on active discretionary management.

Portfolio managers comments

The month of March was marked by a relative calm in terms of the statistics published, developments in geopolitical conflicts and corporate communications. The upward trend that began in October was only interrupted by a few rare instances of profit-taking in early January: the Stoxx 600 gained 6.9% over the quarter and 17.1% since the end of October. In March alone, it is still up 3.6%. This performance was made possible by a rebound in the value sectors, with retail, banks, property, energy and basic resources in the top spots. Conversely, Travel & Leisure and Technology are at the bottom of the league table. We believe that at these price levels, there is no room for disappointment if companies fail to deliver solid Q1 earnings, whereas the FY23 earnings season was an "average" year, with (only) 71% of US companies beating earnings per share expectations. This figure falls to 50% in Europe, where earnings per share growth for this year was revised down by 40bp in March, from 4.5% to 4.1%. With regard to monetary policies, which have a major influence on portfolio performance, the main central banks (Fed, ECB, BoE) kept their key rates unchanged in March, but are preparing the ground for possible rate cuts in the months ahead. This catalyst remains a necessary condition for the rebound of a large proportion of the sectors invested in the portfolio. The main exception was Japan, where the BoE ended its negative interest rate policy (NIRP) in place since 2016 by raising its base rate from -0.1% to 0%.

In March, the fund posted a monthly performance of 4% compared with 3.29% for its benchmark index.

Over the month, the main relative outperformers (versus MSCI AC World) for the securities in the portfolios were :

Samsung SDI (Ecological Transition, +48bps, active weight 2.6%), TSMC (Ecological Transition, +44bps, active weight 2.5%) and Nextera (+30bps, active weight +2.5%). Conversely, the worst relative performers were : Palo Alto (Lifestyle Transition, -55bps, PE +4.3%), Daiichi Sankyo (Medical Transition, -28bps, PE +3.6%) and Dassault Systèmes (Lifestyle and Medical Transition, -22bps, PE +2.5%). Among the main movements, we reduced our exposure to TSMC, Novo Nordisk, Danaher and Bharti Airtel.

At the end of the month, the portfolio comprised 34 stocks with an equity exposure of close to 98%. The portfolio's main convictions remain unchanged: TSMC (Ecological Transition, >6%), Thermo Fisher (Medical Transition, >5.5%), Novo Nordisk (Medical Transition, >5.0%), Palo Alto (Lifestyle Transition, >4.0%) and Agilent (Economic and Medical Transition, >4.0%).

The first quarter of 2024 is similar to 2023, but the outlook is slightly different. After the GAFAs, then the GAFAMs, then the Magnificent Seven, we now have to talk about the Fab Four. They dethroned the Magnificent Seven after a spectacular first quarter. The S&P 500 gained 10%, its best Q1 performance since 2019, despite three disappointments among the Magnificent Seven (Apple, Tesla and Alphabet). Four stocks played the role of locomotive: Meta, Microsoft, Amazon and Nvidia. Nvidia dethroned Tesla to become the most popular stock in the United States, with a performance of +80%, after tripling in 2023. Microsoft dethroned Apple in terms of market capitalisation, Meta announced a dividend payment that boosted its valuation and Amazon improved its profitability. Index concentration remains a definite landscape, but one that we are steering clear of in the Global Leaders strategy. The portfolio's exposure at the end of the month was close to 98%.

Sustainable transitions exposure⁽⁴⁾

Analysis methodology

We develop proprietary models based on our expertise and conviction to add tangible value in the selection of portfolio securities. DNCA's ESG analysis model, Above & Beyond Analysis (ABA), respects this principle and offers a rating that we control the entire construction. Information from companies is the main input to our rating. The methodologies for calculating ESG indicators and our responsible investor and engagement policy are available on our website [by clicking here](#).

⁽¹⁾ The rating out of 10 integrates 4 risks of responsibility: shareholder, environmental, social and societal. Whatever their sector of activity, 24 indicators are evaluated, such as social climate, accounting risks, suppliers, business ethics, energy policy, quality of management.

⁽²⁾ The ABA Matrix combines the Responsibility Risk and the Sustainable Transition exposure of the portfolio. It allows us to map companies to be mapped using a risk/opportunity approach.

⁽³⁾ 1 No poverty. 2 Zero hunger. 3 Good health and well-being. 4 Quality education. 5 Gender equality. 6 Clean water and sanitation. 7 Clean and affordable energy. 8 Decent work and economic growth. 9 Industry, innovation and infrastructure. 10 Reduced inequalities. 11 Sustainable cities and communities. 12 Sustainable consumption and production. 13 Tackling climate change. 14 Aquatic life. 15 Terrestrial life. 16 Peace, justice and effective institutions. 17 Partnerships to achieve the goals.

⁽⁴⁾ 5 transitions based on a long-term perspective of the financing of the economy allow the identification of activities with a positive contribution to sustainable development and to measure the exposure of companies in terms of turnover as well as exposure to the UN Sustainable Development Goals.

*The coverage rate measures the proportion of issuers (equities and corporate bonds) taken into account in the calculation of the extra-financial indicators. This measure is calculated as a % of the fund's net assets adjusted for cash, money market instruments, derivatives and any vehicle outside the scope of "listed equities and corporate bonds".

DNCA Finance Luxembourg Branch - 1 Place d'Armes - L-1136 Luxembourg

The Sub-Fund has as its objective sustainable investment within the meaning of Article 9 of SFDR. The investment strategy is geared towards low carbon economy which leads to a lower portfolio's carbon footprint than the MSCI All Countries World Index.

This product is subject to sustainability risks as defined in the Regulation 2019/2088 (article 2(22)) by environmental, social or governance event or condition that, if it occurs, could cause an actual or a potential material negative impact on the value of the investment.

If the portfolio investment process can incorporate ESG approach, the portfolio's investment objective is not primarily to mitigate this risk. The sustainability risk management policy is available on the website of the Management Company.

The reference benchmark as defined in the Regulation 2019/2088 (article 2(22)) does not intend to be consistent with the environmental or social characteristics promoted by the fund.

Glossary

Beta. Measures the average extent to which a fund moves relative to the broader market. The beta of a market is 1. A fund with a beta of more than 1 moves on average to a greater extent than the market. A fund with a beta of less than 1 moves on average to a lesser extent. If beta is a minus number, it is likely that the stock and the market move in opposite directions.

Correlation coefficient. The correlation coefficient is a measure of correlation. It is used to determine the relationship between two assets over a given period. A positive coefficient means that the two assets move in the same direction. Conversely, a negative coefficient means that the assets move in the opposite direction. The correlation or decorrelation can be more or less strong and varies between -1 and 1.

Dividend yield. Annual dividends per share / Price per share

EV (Enterprise Value). Market value of common stock + market value of preferred equity + market value of debt + minority interest - cash and investments.

ND/EBITDA (Net Debt / EBITDA). A measurement of leverage, calculated as a company's interest-bearing liabilities minus cash or cash equivalents, divided by its EBITDA. The net debt to EBITDA ratio is a debt ratio that shows how many years it would take for a company to pay back its debt if net debt and EBITDA are held constant.

P/B. The Price to Book Ratio is the ratio of the market value of equity (market capitalisation) to its book value. It is used to compare the market valuation of a company with its book value.

P/CF (Share price/Cash Flow per Share). The price-to-cash-flow ratio is an indicator of a stock's valuation.

PER (Price Earnings Ratio). A company's share price divided by the amount of profits it makes for each share in a 12-month period. PE ratios are normally calculated on the base of all the profit made in the period, whether or not the profit is paid out to shareholders in that period.

ROE (Return On Equity). The amount of net income returned as a percentage of shareholders equity. Return on equity measures a corporation's profitability by revealing how much profit a company generates with the money shareholders have invested.

Sharpe Ratio. A way of measuring the historical risk-adjusted return on an investment. It is the average previous return minus the risk-free return, divided by the standard deviation (a measure of risk that looks at the diversion of actual returns from expected returns).

Sharpe Ratio. The Sharpe ratio measures the excess return over the risk-free money rate of an asset portfolio divided by the standard deviation of that return. It is therefore a measure of the marginal return per unit of risk. It is used to measure the performance of managers with different risk policies.

Tracking error. Tracking Error is a measure of how closely an investment portfolio follows the index against which it is benchmarked. It is the difference in the return earned by a portfolio and the return earned by the benchmark against which the portfolio is constructed. For example, if a bond portfolio earns a return of 5.15% during a period when the portfolio's benchmark (say, for example, the Lehman Brothers Index) produces a return of 5.06%, the tracking error is .09%, or 9 basis points.
