

# DNCA INVEST EUROSE

## FLEXIBLE ASSET

### Investment objective

The Sub-Fund seeks to outperform the 20% EURO STOXX 50 + 80% Bloomberg Euro Aggregate 1-10 Year composite index calculated with dividends reinvested, over the recommended investment period. Investors' attention is drawn to the fact that the management style is discretionary and integrates environmental, social / societal and governance (ESG) criteria.

To achieve its investment objective, the investment strategy is based on active discretionary management.

## Rating breakdown

Bonds portfolio (base 100)

These data are provided for guidance purposes only. The management company does not systematically and automatically use ratings issued by credit rating agencies and carry out its own credit analysis.

## Maturity breakdown

Bonds portfolio (base 100)

\*The figure between brackets represents the issuer's 'responsibility' score. Please refer to the Internal Extra-financial analysis page for the analysis methodology.

## Portfolio managers comments

In an environment still largely dominated by US trade policy, the US and European central banks are keeping their key rates unchanged, and maintaining a relatively unaccommodating tone. Eurozone interest rates rose over the month: with the German 5-year rising from 2.17% to 2.30%, government debt indices corrected slightly, while the continuing narrowing of spreads enabled credit to perform well: +0.5% for investment grade and +1.2% for high yield. Equities also rose (EURO STOXX 50 NR +0.5%) with the announcement by the United States of several trade agreements.

DNCA Invest Eurose continued its good momentum over the month (0.28%), reaching 6.28% since the beginning of the year.

Equities made a positive contribution, thanks in particular to the banking sector (BNP Paribas, Commerzbank, Intesa Sanpaolo and Société Générale). Over the course of the month, the fund increased its exposure to the utilities sector with the strengthening of Enel and the addition of German power grid operator E.On to its portfolio. The international companies Airbus, D'Ieteren and Wienerberger were reinforced. Among stocks subject to a takeover bid, Just Eat Takeaway is reinforced and Waga Energy joins the selection (takeover carry: 1.9%). Conversely, the fund is lighter on French stocks BNP Paribas, Bouygues, Orange, Saint-Gobain, Société Générale and Thales. At the end of July, the fund's net exposure to equities was 20.7% (excluding carry).

Within the bond portfolio, a large number of issuers are redeeming their bonds early, as expected: eircom, IGT (now Brightstar), webuild, Loxam, Ontex, Paprec, Sabadell and TDF Infrastructure. After some excellent performances, and for reasons of valuation and risk, many lines were sold (Picard 2029) or reduced: ams-OSRAM 2029, Ardagh Metal Packaging 2029, Avis Budget 2029, Coface 2033, Saipem 2030, Ethias 2035, Imerys 2029, as well as Legrand 2033 and voestalpine 2028 convertibles. Some rare transactions on the primary market offered a premium, which was seized on this occasion: Paprec 2030, TDF 2030, Prosus 2035, Nissan Motor 2029, El Corte Inglés 2033, Allwyn 2031 and Flutter 2031. Finally, following the same logic of near redemption as for the company's shares, a Just Eat Takeaway 2028 convertible was added to the portfolio. Reacting to extreme credit market valuations, with spreads close to historic lows, the end of the month saw the start of a move into sovereign bonds (Italy, Spain and the European Union), which saw the weighting of this category rise to 13% at the very beginning of August.

The portfolio's net sensitivity was again increased to 3.5.

The portfolio's extra-financial characteristics show a responsibility performance of `/responsability_score` and a sustainable transition exposure of 82.68%.

Economic risks have not disappeared with the (preliminary) trade agreements announced by the US administration. This is borne out by the corporate results published in Q2, punctuated by numerous profit warnings in cyclical sectors (automotive, chemicals in particular); with the exception of banks and utilities - naturally more defensive - the message from management remains generally unencouraging. At the same time, the valuation of risky markets, this time primarily credit, is prompting us to be even more cautious: we are buying government bonds and increasing our bond sensitivities. This will further enhance the agility of our management in the coming phases of volatility.

## Internal extra-financial analysis

### ABA coverage rate<sup>+</sup> (95.2%)

### Average Responsibility Score: 4.9/10

### Responsibility risk breakdown<sup>(1)</sup>

### Transition/CSR exposure<sup>(2)</sup>

### SDG's exposure<sup>(3)</sup> (% of revenues)

### Sustainable transitions exposure<sup>(4)</sup>

## Analysis methodology

We develop proprietary models based on our expertise and conviction to add tangible value in the selection of portfolio securities. DNCA's ESG analysis model, Above & Beyond Analysis (ABA), respects this principle and offers a rating that we control the entire construction. Information from companies is the main input to our rating. The methodologies for calculating ESG indicators and our responsible investor and engagement policy are available on our website [by clicking here](#).

<sup>(1)</sup> The rating out of 10 integrates 4 risks of responsibility: shareholder, environmental, social and societal. Whatever their sector of activity, 24 indicators are evaluated, such as social climate, accounting risks, suppliers, business ethics, energy policy, quality of management.

<sup>(2)</sup> The ABA Matrix combines the Responsibility Risk and the Sustainable Transition exposure of the portfolio. It allows us to map companies to be mapped using a risk/opportunity approach.

<sup>(3)</sup> 1 No poverty. 2 Zero hunger. 3 Good health and well-being. 4 Quality education. 5 Gender equality. 6 Clean water and sanitation. 7 Clean and affordable energy. 8 Decent work and economic growth. 9 Industry, innovation and infrastructure. 10 Reduced inequalities. 11 Sustainable cities and communities. 12 Sustainable consumption and production. 13 Tackling climate change. 14 Aquatic life. 15 Terrestrial life. 16 Peace, justice and effective institutions. 17 Partnerships to achieve the goals.

<sup>(4)</sup> 5 transitions based on a long-term perspective of the financing of the economy allow the identification of activities with a positive contribution to sustainable development and to measure the exposure of companies in terms of turnover as well as exposure to the UN Sustainable Development Goals.

\*The coverage rate measures the proportion of issuers (equities and corporate bonds) taken into account in the calculation of the extra-financial indicators. This measure is calculated as a % of the net assets adjusted for cash, money market instruments, derivatives and any vehicle outside the scope of "listed equities and corporate bonds".

Source : MSCI

It should be noted that DNCA Finance changed its non-financial data provider in October 2023 from monitoring negative externalities by the Scope Rating provider to monitoring performance indicators (PAI) by the MSCI provider.

This change of supplier and indicator typology prevents DNCA Finance from producing a 3-year ESG performance comparison. DNCA Finance Committed to produce this historical data from the data available in December 2023.

This Fund is being marketed as a public offering in Luxembourg. You can contact the DNCA Finance branch:

DNCA Finance Luxembourg Branch - 1 Place d'Armes - L-1136 Luxembourg

This product promotes environmental or social characteristics, but does not have as its objective a sustainable investment. It might invest partially in assets that have a sustainable objective, for instance qualified as sustainable according to the EU classification.

This product is subject to sustainability risks as defined in the Regulation 2019/2088 (article 2(22)) by environmental, social or governance event or condition that, if it occurs, could cause an actual or a potential material negative impact on the value of the investment.

If the portfolio investment process can incorporate ESG approach, the portfolio's investment objective is not primarily to mitigate this risk. The sustainability risk management policy is available on the website of the Management Company.

The reference benchmark as defined in the Regulation 2019/2088 (article 2(22)) does not intend to be consistent with the environmental or social characteristics promoted by the fund.

## Glossary

**Beta.** Measures the average extent to which a fund moves relative to the broader market. The beta of a market is 1. A fund with a beta of more than 1 moves on average to a greater extent than the market. A fund with a beta of less than 1 moves on average to a lesser extent. If beta is a minus number, it is likely that the stock and the market move in opposite directions.

**Convertible Bond.** Hybrid securities that have both bond and equity characteristics. Convertible bonds make periodic interest payments like a bond, but bondholders also get an option to exchange their bonds for a specified number of shares of common stock. Convertible bonds typically carry lower coupon rates, thus reducing the corporation's cost of borrowing.

**Correlation coefficient.** The correlation coefficient is a measure of correlation. It is used to determine the relationship between two assets over a given period. A positive coefficient means that the two assets move in the same direction. Conversely, a negative coefficient means that the assets move in the opposite direction. The correlation or decorrelation can be more or less strong and varies between -1 and 1.

**Delta.** The delta of a position expresses the change in the price of an option when its underlying asset price varies. It corresponds to the derivative of the theoretical value of the option relating to the price of the underlying asset.

**Maturity.** The time when a bond or other debt instrument is due to for redemption (is due to mature); or the length of time between the issue of such an instrument and the date it is due for redemption (the maturity date).

**Sensitivity.** The sensitivity of a bond measures the change in its percentage value induced by a given change in interest rates.

**Sharpe Ratio.** A way of measuring the historical risk-adjusted return on an investment. It is the average previous return minus the risk-free return, divided by the standard deviation (a measure of risk that looks at the diversion of actual returns from expected returns).

**Sharpe Ratio.** The Sharpe ratio measures the excess return over the risk-free money rate of an asset portfolio divided by the standard deviation of that return. It is therefore a measure of the marginal return per unit of risk. It is used to measure the performance of managers with different risk policies.

**Tracking error.** Tracking Error is a measure of how closely an investment portfolio follows the index against which it is benchmarked. It is the difference in the return earned by a portfolio and the return earned by the benchmark against which the portfolio is constructed. For example, if a bond portfolio earns a return of 5.15% during a period when the portfolio's benchmark (say, for example, the Lehman Brothers Index) produces a return of 5.06%, the tracking error is .09%, or 9 basis points.
