

DNCA INVEST EUROSE

FLEXIBLE ASSET

Investment objective

The Sub-Fund seeks to outperform the 20% EURO STOXX 50 + 80% Bloomberg Euro Aggregate 1-10 Year composite index calculated with dividends reinvested, over the recommended investment period. Investors' attention is drawn to the fact that the management style is discretionary and integrates environmental, social / societal and governance (ESG) criteria.

To achieve its investment objective, the investment strategy is based on active discretionary management.

Portfolio managers comments

The markets are easing further after a very turbulent April. Although still closely followed, D. Trump's announcements are having less and less impact. The EURO STOXX 50 NR is back to its pre-April 2 levels, or "Liberation Day" in the United States. The index rose by 5.4% over the month. In its wake, credit rose by +0.5% and +1.4% respectively in the investment-grade and high-yield segments.

DNCA Invest Eurose continues its good momentum over the month (+ 1.47%), with+ 5.78% since the beginning of the year.

Equities made a positive contribution over the month, thanks in particular to the banking sector (BNP Paribas, Commerzbank and Société Générale) and Thales. During the month, the fund initiated a new position with the addition to its portfolio of Enel, Italy's leading integrated energy company (production and distribution), which operates not only in Italy, but also on the Iberian peninsula and in Latin America. With a P/E of less than 12x, the share is trading at a discount to its European peers, and the leverage of 2.5x remains healthy, enabling both the acceleration of network development and a dividend yield in excess of 5.8%. The fund has strengthened its positions in stocks under offer (Grupo Catalana Occidente, Just Eat Takeaway and Verallia), and entered 2 new positions (Covestro and Esso). International holdings continue to be reinforced on Commerzbank, CTP, Intesa SanPaolo, Siemens and wienerberger; conversely, French companies, mainly banks, are being reduced. At the end of May, the fund's net equity exposure stood at 23.9% (22.3% excluding carry trades), after increased hedging (3.2%).

In the bond portfolio, as the credit market becomes more expensive, risk is gradually being reduced, by reducing exposure to high-yield issuers (Ardagh Metal Packaging, ams-OSRAM, Forvia, Volvo Cars, Cheplapharm) and cyclical issuers (Traton, Südzucker), and by selling Iberdrola convertible bonds following their excellent post-issue performance. In the same vein, the Spain 2034 line has been strengthened, as has the pharmaceuticals sector (Ipsen, IQVIA, Lundbeck). Finally, the primary market enabled us to strengthen the financial sector, in particular Tier 2 (investment grade) with comfortable yields (Bankinter, ING, Lloyds Banking, AXA). Duration was increased by these transactions and by the strengthening of the derivative position on German 5-years, reaching 3.2 at the end of the month.

The extra-financial characteristics of the portfolio show a responsibility performance of /responsability_score and a sustainable transition exposure of 83.35%.

The markets have regained all their optimism - and valuation - from before D. Trump's massive announcements. However, it is hard to imagine that the customs measures already underway, the ongoing threats and, above all, the widespread uncertainty will not have an impact on the global economy. We prefer to maintain a cautious approach to management: net equity exposure (excluding carry trades) has been revised to 22%, and credit investments remain defensive, with duration increased to 3.2. Our ability to intervene should the markets react in the coming weeks remains intact.

Internal extra-financial analysis

ABA coverage rate⁺ (95.3%)

Average Responsibility Score: 4.9/10

Responsibility risk breakdown⁽¹⁾

Transition/CSR exposure⁽²⁾

SDG's exposure⁽³⁾ (% of revenues)

Sustainable transitions exposure⁽⁴⁾

Analysis methodology

We develop proprietary models based on our expertise and conviction to add tangible value in the selection of portfolio securities. DNCA's ESG analysis model, Above & Beyond Analysis (ABA), respects this principle and offers a rating that we control the entire construction. Information from companies is the main input to our rating. The methodologies for calculating ESG indicators and our responsible investor and engagement policy are available on our website [by clicking here](#).

⁽¹⁾ The rating out of 10 integrates 4 risks of responsibility: shareholder, environmental, social and societal. Whatever their sector of activity, 24 indicators are evaluated, such as social climate, accounting risks, suppliers, business ethics, energy policy, quality of management.

⁽²⁾ The ABA Matrix combines the Responsibility Risk and the Sustainable Transition exposure of the portfolio. It allows us to map companies to be mapped using a risk/opportunity approach.

⁽³⁾ 1 No poverty. 2 Zero hunger. 3 Good health and well-being. 4 Quality education. 5 Gender equality. 6 Clean water and sanitation. 7 Clean and affordable energy. 8 Decent work and economic growth. 9 Industry, innovation and infrastructure. 10 Reduced inequalities. 11 Sustainable cities and communities. 12 Sustainable consumption and production. 13 Tackling climate change. 14 Aquatic life. 15 Terrestrial life. 16 Peace, justice and effective institutions. 17 Partnerships to achieve the goals.

⁽⁴⁾ 5 transitions based on a long-term perspective of the financing of the economy allow the identification of activities with a positive contribution to sustainable development and to measure the exposure of companies in terms of turnover as well as exposure to the UN Sustainable Development Goals.

*The coverage rate measures the proportion of issuers (equities and corporate bonds) taken into account in the calculation of the extra-financial indicators. This measure is calculated as a % of the net assets adjusted for cash, money market instruments, derivatives and any vehicle outside the scope of "listed equities and corporate bonds".

It should be noted that DNCA Finance changed its non-financial data provider in October 2023 from monitoring negative externalities by the Scope Rating provider to monitoring performance indicators (PAI) by the MSCI provider.

This change of supplier and indicator typology prevents DNCA Finance from producing a 3-year ESG performance comparison. DNCA Finance Committed to produce this historical data from the data available in December 2023.

A summary of investors' rights is available in English at the following link: <https://www.dnca-investments.com/en/regulatory-information>

This product promotes environmental or social characteristics, but does not have as its objective a sustainable investment. It might invest partially in assets that have a sustainable objective, for instance qualified as sustainable according to the EU classification.

This product is subject to sustainability risks as defined in the Regulation 2019/2088 (article 2(22)) by environmental, social or governance event or condition that, if it occurs, could cause an actual or a potential material negative impact on the value of the investment.

If the portfolio investment process can incorporate ESG approach, the portfolio's investment objective is not primarily to mitigate this risk. The sustainability risk management policy is available on the website of the Management Company.

The reference benchmark as defined in the Regulation 2019/2088 (article 2(22)) does not intend to be consistent with the environmental or social characteristics promoted by the fund.

Glossary

Beta. Measures the average extent to which a fund moves relative to the broader market. The beta of a market is 1. A fund with a beta of more than 1 moves on average to a greater extent than the market. A fund with a beta of less than 1 moves on average to a lesser extent. If beta is a minus number, it is likely that the stock and the market move in opposite directions.

Convertible Bond. Hybrid securities that have both bond and equity characteristics. Convertible bonds make periodic interest payments like a bond, but bondholders also get an option to exchange their bonds for a specified number of shares of common stock. Convertible bonds typically carry lower coupon rates, thus reducing the corporation's cost of borrowing.

Correlation coefficient. The correlation coefficient is a measure of correlation. It is used to determine the relationship between two assets over a given period. A positive coefficient means that the two assets move in the same direction. Conversely, a negative coefficient means that the assets move in the opposite direction. The correlation or decorrelation can be more or less strong and varies between -1 and 1.

Delta. The delta of a position expresses the change in the price of an option when its underlying asset price varies. It corresponds to the derivative of the theoretical value of the option relating to the price of the underlying asset.

Maturity. The time when a bond or other debt instrument is due to for redemption (is due to mature); or the length of time between the issue of such an instrument and the date it is due for redemption (the maturity date).

Sensitivity. The sensitivity of a bond measures the change in its percentage value induced by a given change in interest rates.

Sharpe Ratio. A way of measuring the historical risk-adjusted return on an investment. It is the average previous return minus the risk-free return, divided by the standard deviation (a measure of risk that looks at the diversion of actual returns from expected returns).

Sharpe Ratio. The Sharpe ratio measures the excess return over the risk-free money rate of an asset portfolio divided by the standard deviation of that return. It is therefore a measure of the marginal return per unit of risk. It is used to measure the performance of managers with different risk policies.

Tracking error. Tracking Error is a measure of how closely an investment portfolio follows the index against which it is benchmarked. It is the difference in the return earned by a portfolio and the return earned by the benchmark against which the portfolio is constructed. For example, if a bond portfolio earns a return of 5.15% during a period when the portfolio's benchmark (say, for example, the Lehman Brothers Index) produces a return of 5.06%, the tracking error is .09%, or 9 basis points.

Additional notes

This material has been provided for information purposes only to investment service providers or other Professional Clients, Qualified or Institutional Investors and, when required by local regulation, only at their written request. This material must not be used with Retail Investors. It is the responsibility of each investment service provider to ensure that the offering or sale of fund shares or third party investment services to its clients complies with the relevant national law.

Please read the Prospectus and Key Information Document carefully before investing. If the fund is registered in your jurisdiction, these documents are also available free of charge and in the official language of the country of registration at the Natixis Investment Managers website (im.natixis.com/intl/intl-fund-documents).

To obtain a summary of investor rights in the official language of your jurisdiction, please consult the legal documentation section of the website (im.natixis.com/intl/intl-fund-documents).
