Portfolio managers comments

Geopolitics had a limited impact on the markets (+4.96% for the S&P 500, +0.56% for the MSCI World EUR and -1.3% for the Stoxx 600), which focused more on trade negotiations (notably with China and Europe) and improved macroeconomic indicators in Europe and the United States.

In the US, the labor market remained solid, with unemployment stable at 4.2%, and consumer confidence improved thanks to the easing of trade tensions. Logically, the Fed kept rates unchanged, and Mr Powell did not commit to a precise timetable for the rate cut, although the market is now anticipating a first cut in September, followed by a second in December.

In the eurozone, the ECB cut rates by 25 bp at the same time as it revised its inflation forecasts downwards (low point expected at 1.4% in Q1 2026, compared with 1.9% in May).

On the microeconomic front, business sentiment stabilized, with the June composite PMI at 50.2, as in May. German economic momentum continues to improve, with surveys (ZEW, PMI, IFO) posting better-than-expected results due to the positive impact of fiscal stimulus.

As a result, we continue to believe that the economic environment should remain favorable to risky assets, provided that trade negotiations are not derailed, and that industrial activity in the US confirms its rebound.

Against this backdrop, our exposure to equities has risen to 83%, after having been briefly lowered at the time of the peak of uncertainty in the Middle East.

We increased our exposure to US stocks, notably Oracle, which reported strong growth expected in 2026 thanks to its cloud business. Sales of MultiCloud databases are currently growing by over 100%, and the group has signed several major contracts, including one that could generate more than \$30 billion a year as early as 2028.

We also strengthened our position on Nvidia following our meeting with the CEO at the Vivatec trade show. Mr Huang reconfirmed the enormous growth potential offered by artificial intelligence, robotics and quantum computing, well beyond 2026.

This momentum has propelled the group ahead of Microsoft, becoming the world's most valuable company with a market capitalization of \$3.8 trillion.

Conversely, we lightened up on the European defense sector (Thales sale, RENK and Leonardo lightening) ahead of the NATO summit, mainly on valuation and stock market momentum considerations.

Among our positive contributors were three US stocks: Meta, Nvidia and Goldman Sachs, while our three main detractors were Leonardo, Renk and Renault.

On the bond side, we participated in the primary issues of Publicis (BBB+) 3.375% 2032 and CMA CGM (BB+) 5%2031 in order to lengthen the fund's sensitivity.

Internal extra-financial analysis

ABA coverage rate⁺ (97.8%)

Average Responsibility Score: 4.8/10

Responsibility risk breakdown⁽¹⁾

Selectivity universe exclusion rate

Transition/CSR exposure⁽²⁾

SDG's exposure⁽³⁾ (% of revenues)

Sustainable transitions exposure⁽⁴⁾

Analysis methodology

We develop proprietary models based on our expertise and conviction to add tangible value in the selection of portfolio securities. DNCA's ESG analysis model, Above & Beyond Analysis (ABA), respects this principle and offers a rating that we control the entire construction. Information from companies is the main input to our rating. The methodologies for calculating ESG indicators and our responsible investor and engagement policy are available on our website [by clicking here](#).

⁽¹⁾ The rating out of 10 integrates 4 risks of responsibility: shareholder, environmental, social and societal. Whatever their sector of activity, 24 indicators are evaluated, such as social climate, accounting risks, suppliers, business ethics, energy policy, quality of management.

⁽²⁾ The ABA Matrix combines the Responsibility Risk and the Sustainable Transition exposure of the portfolio. It allows us to map companies to be mapped using a risk/opportunity approach.

⁽³⁾ 1 No poverty. 2 Zero hunger. 3 Good health and well-being. 4 Quality education. 5 Gender equality. 6 Clean water and sanitation. 7 Clean and affordable energy. 8 Decent work and economic growth. 9 Industry, innovation and infrastructure. 10 Reduced inequalities. 11 Sustainable cities and communities. 12 Sustainable consumption and production. 13 Tackling climate change. 14 Aquatic life. 15 Terrestrial life. 16 Peace, justice and effective institutions. 17 Partnerships to achieve the goals.

⁽⁴⁾ 5 transitions based on a long-term perspective of the financing of the economy allow the identification of activities with a positive contribution to sustainable development and to measure the exposure of companies in terms of turnover as well as exposure to the UN Sustainable Development Goals.

*The coverage rate measures the proportion of issuers (equities and corporate bonds) taken into account in the calculation of the extra-financial indicators. This measure is calculated as a % of the net assets adjusted for cash, money market instruments, derivatives and any vehicle outside the scope of "listed equities and corporate bonds".

It should be noted that DNCA Finance changed its non-financial data provider in October 2023 from monitoring negative externalities by the Scope Rating provider to monitoring performance indicators (PAI) by the MSCI provider.

This change of supplier and indicator typology prevents DNCA Finance from producing a 3-year ESG performance comparison. DNCA Finance Committed to produce this historical data from the data available in December 2023.

This product promotes environmental or social characteristics, but does not have as its objective a sustainable investment. It might invest partially in assets that have a sustainable objective, for instance qualified as sustainable according to the EU classification.

This product is subject to sustainability risks as defined in the Regulation 2019/2088 (article 2(22)) by environmental, social or governance event or condition that, if it occurs, could cause an actual or a potential material negative impact on the value of the investment.

If the portfolio investment process can incorporate ESG approach, the portfolio's investment objective is not primarily to mitigate this risk. The sustainability risk management policy is available on the website of the Management Company.

The reference benchmark as defined in the Regulation 2019/2088 (article 2(22)) does not intend to be consistent with the environmental or social characteristics promoted by the fund.

Glossary

Beta. Measures the average extent to which a fund moves relative to the broader market. The beta of a market is 1. A fund with a beta of more than 1 moves on average to a greater extent than the market. A fund with a beta of less than 1 moves on average to a lesser extent. If beta is a minus number, it is likely that the stock and the market move in opposite directions.

Convertible Bond. Hybrid securities that have both bond and equity characteristics. Convertible bonds make periodic interest payments like a bond, but bondholders also get an option to exchange their bonds for a specified number of shares of common stock. Convertible bonds typically carry lower coupon rates, thus reducing the corporation's cost of borrowing.

Correlation coefficient. The correlation coefficient is a measure of correlation. It is used to determine the relationship between two assets over a given period. A positive coefficient means that the two assets move in the same direction. Conversely, a negative coefficient means that the assets move in the opposite direction. The correlation or decorrelation can be more or less strong and varies between -1 and 1.

Delta. The delta of a position expresses the change in the price of an option when its underlying asset price varies. It corresponds to the derivative of the theoretical value of the option relating to the price of the underlying asset.

Maturity. The time when a bond or other debt instrument is due to for redemption (is due to mature); or the length of time between the issue of such an instrument and the date it is due for redemption (the maturity date).

Sensitivity. The sensitivity of a bond measures the change in its percentage value induced by a given change in interest rates.

Sharpe Ratio. A way of measuring the historical risk-adjusted return on an investment. It is the average previous return minus the risk-free return, divided by the standard deviation (a measure of risk that looks at the diversion of actual returns from expected returns).

Sharpe Ratio. The Sharpe ratio measures the excess return over the risk-free money rate of an asset portfolio divided by the standard deviation of that return. It is therefore a measure of the marginal return per unit of risk. It is used to measure the performance of managers with different risk policies.

Tracking error. Tracking Error is a measure of how closely an investment portfolio follows the index against which it is benchmarked. It is the difference in the return earned by a portfolio and the return earned by the benchmark against which the portfolio is constructed. For example, if a bond portfolio earns a return of 5.15% during a period when the portfolio's benchmark (say, for example, the Lehman Brothers Index) produces a return of 5.06%, the tracking error is .09%, or 9 basis points.
