

DNCA INVEST GLOBAL CONVERTIBLES

GLOBAL CONVERTIBLE BONDS

Investment objective

The investment objective of DNCA Invest - Global Convertibles (the "Sub-Fund") is to outperform the Index over the recommended minimum investment period of 4 years by investing in global convertible bonds markets. Investors' attention is drawn to the fact that the management style is discretionary and integrates environmental, social / societal and governance (ESG) criteria. To achieve its investment objective, the investment strategy is based on active discretionary management.

Financial characteristics

NAV (€)	108.28
Net assets (€M)	41
Delta	57%
Average yield	-0.48%
Average premium	37.38%
Average modified duration	4.10
Average maturity (years)	4.19
Number of lines	96
Average rating	BBB

Risk indicator

Lower risk Higher risk

Synthetic risk indicator according to PRIIPS. 1 corresponds to the lowest level and 7 to the highest level.

Main risks: risk relating to discretionary management, interest-rate risk, credit risk, risk of capital loss, liquidity risk, risk related to investments in emerging markets, equity risk, risk related to exchange rate, specific risks associated with OTC derivative transactions, counterparty risk, bond Connect programme risk, risk of securities rated below Investment Grade or unrated securities, sustainability risk, ESG risk

Portfolio managers comments

The main equity indices posted clear gains for the month of May. In particular, the S&P500 and Nasdaq returned to positive territory since the start of the year. Once again, the month saw an unprecedented sequence of events in trade negotiations. A 90-day truce in the trade war between China and the United States first propelled risky assets a little higher. On the European front, after threatening to impose 50% tariffs from June 1, the US administration finally decided to maintain their suspension until July 9. Finally, in the last few days of the month, relations between Beijing and Washington deteriorated once again amid accusations of violation of the preliminary agreement and restrictions on cutting-edge technology tools. The issue of public deficits is also making a comeback. Rekindled by the "One Big, Beautiful Bill" tax proposal and Moody's downgrade of the U.S. credit rating, concerns about fiscal trajectories have put pressure on the dollar and U.S. interest rates. Against this backdrop of uncertainty, both the Fed and the ECB are adopting a wait-and-see tone for the months ahead. They are relying in particular on macroeconomic aggregates that are proving resilient at this stage, benefiting in part from lower energy prices.

Against this backdrop, the primary market regained momentum, with almost \$14 billion in issues over the month. Four transactions were subscribed: Akamai Technologies 2033, a new issue in the US Tech sector, Vonovia 2032 in German real estate, Euronext 2032 in European financial services and Bilibili 2030 in the Chinese online entertainment sector. On the secondary front, several companies took profits during the bullish phase: Xiaomi, Palo Alto Networks, SK Hynix, Nikkon, Zscaler, Safran, Spie, Webuild, Vinci and Nordex. Conversely, tactical reinforcements were made on ASML, Iberdrola, Rheinmetall, Trip.com, Microstrategy, Samsung, Lumentum.

The valuation of international convertible bonds continues to move into positive territory. The current macroeconomic context remains marked by numerous uncertainties. These are generating significant regime shifts in the interest rate, credit, equity and currency markets. In this environment, convertible bonds offer an attractive alternative to direct investment in equities: the product's intrinsic convexity cushions phases of market stress, while significantly capturing bullish phases. The fund boasts a balanced positioning, with a delta of almost 57% and a current yield of 0.8%.

This product promotes environmental or social characteristics, but does not have as its objective a sustainable investment. It might invest partially in assets that have a sustainable objective, for instance qualified as sustainable according to the EU classification.

This product is subject to sustainability risks as defined in the Regulation 2019/2088 (article 2(22)) by environmental, social or governance event or condition that, if it occurs, could cause an actual or a potential material negative impact on the value of the investment.

If the portfolio investment process can incorporate ESG approach, the portfolio's investment objective is not primarily to mitigate this risk. The sustainability risk management policy is available on the website of the Management Company.

The reference benchmark as defined in the Regulation 2019/2088 (article 2(22)) does not intend to be consistent with the environmental or social characteristics promoted by the fund.

Glossary

Beta. Measures the average extent to which a fund moves relative to the broader market. The beta of a market is 1. A fund with a beta of more than 1 moves on average to a greater extent than the market. A fund with a beta of less than 1 moves on average to a lesser extent. If beta is a minus number, it is likely that the stock and the market move in opposite directions.

Correlation coefficient. The correlation coefficient is a measure of correlation. It is used to determine the relationship between two assets over a given period. A positive coefficient means that the two assets move in the same direction. Conversely, a negative coefficient means that the assets move in the opposite direction. The correlation or decorrelation can be more or less strong and varies between -1 and 1.

Dividend yield. Annual dividends per share / Price per share

EV (Enterprise Value). Market value of common stock + market value of preferred equity + market value of debt + minority interest - cash and investments.

ND/EBITDA (Net Debt / EBITDA). A measurement of leverage, calculated as a company's interest-bearing liabilities minus cash or cash equivalents, divided by its EBITDA. The net debt to EBITDA ratio is a debt ratio that shows how many years it would take for a company to pay back its debt if net debt and EBITDA are held constant.

P/B. The Price to Book Ratio is the ratio of the market value of equity (market capitalisation) to its book value. It is used to compare the market valuation of a company with its book value.

P/CF (Share price/Cash Flow per Share). The price-to-cash-flow ratio is an indicator of a stock's valuation.

PER (Price Earnings Ratio). A company's share price divided by the amount of profits it makes for each share in a 12-month period. PE ratios are normally calculated on the base of all the profit made in the period, whether or not the profit is paid out to shareholders in that period.

ROE (Return On Equity). The amount of net income returned as a percentage of shareholders equity. Return on equity measures a corporation's profitability by revealing how much profit a company generates with the money shareholders have invested.

Sharpe Ratio. A way of measuring the historical risk-adjusted return on an investment. It is the average previous return minus the risk-free return, divided by the standard deviation (a measure of risk that looks at the diversion of actual returns from expected returns).

Sharpe Ratio. The Sharpe ratio measures the excess return over the risk-free money rate of an asset portfolio divided by the standard deviation of that return. It is therefore a measure of the marginal return per unit of risk. It is used to measure the performance of managers with different risk policies.

Tracking error. Tracking Error is a measure of how closely an investment portfolio follows the index against which it is benchmarked. It is the difference in the return earned by a portfolio and the return earned by the benchmark against which the portfolio is constructed. For example, if a bond portfolio earns a return of 5.15% during a period when the portfolio's benchmark (say, for example, the Lehman Brothers Index) produces a return of 5.06%, the tracking error is .09%, or 9 basis points.
