

# DNCA INVEST GLOBAL NEW WORLD

GLOBAL EQUITIES

## Investment objective

The investment objective of the Sub-Fund is to seek performance by taking advantage of developments in the equity markets without geographical constraint (including emerging markets) which benefit from the digital transformation of industries and society, over the recommended investment term of 5 years. In this context, the Sub-Fund implements active conviction management by selecting companies eligible to the investment theme. These companies are chosen for their quality of global or local leaders on their respective markets analyzed through the systematic integration of environmental, social / societal and governance (ESG) criteria (such as energy consumption, CO2 emission), or even ethical practices of society.

To achieve its investment objective, the investment strategy is based on active discretionary management.

### Portfolio managers comments

May was marked by contrasting dynamics, between renewed optimism and persistent tensions. Trade de-escalation between the US and China, combined with better-than-expected corporate results, particularly in tech, supported a sharp rebound in equity markets: the S&P 500 gained over 6%, and the Nasdaq 9.6%, their best monthly performance since November 2023. At the same time, concerns about the sustainability of US debt resurfaced. The passage of a large federal budget deficit led to a sharp rise in bond yields, with the 10-year at 4.44% and the 30-year above 5.15%. Despite these tensions, markets held up well, buoyed by solid earnings and the enthusiasm for technology stocks.

Against this backdrop, DNCA Invest Global New World posted a performance of 8.87%, slightly down on its benchmark, which rose by 9.62% mark. The main contributors to relative performance were companies linked to technology megatrends: Veeva, Intuit and Snowflake, whose stocks benefited from the quality of their results, as well as our under-exposures to Apple and Nintendo. Conversely, Fiserv suffered from Clover's slowdown, Synopsys from potential restrictions on China, and AT&T and Stryker from their defensive nature.

Over the medium term, we remain true to our investment philosophy of quality, visibility and megatrends.

In this context, we adapted the portfolio: we reduced our exposure to AT&T and Walmart, defensive stocks, sold Ansys, and took profits on Nvidia. At the same time, we increased our exposure to Broadcom, Arista, Tencent, Toast and Alphabet, and initiated a position in The Trade Desk. These adjustments reflect our confidence in innovative companies, well positioned to take advantage of structural transformations, despite an uncertain macroeconomic environment.

## Internal extra-financial analysis

### ABA coverage rate<sup>+</sup> (100%)

Average Responsibility Score: 4.5/10

### Responsibility risk breakdown<sup>(1)</sup>

### Selectivity universe exclusion rate

### Transition/CSR exposure<sup>(2)</sup>

### SDG's exposure<sup>(3)</sup> (% of revenues)

### Sustainable transitions exposure<sup>(4)</sup>

## Analysis methodology

We develop proprietary models based on our expertise and conviction to add tangible value in the selection of portfolio securities. DNCA's ESG analysis model, Above & Beyond Analysis (ABA), respects this principle and offers a rating that we control the entire construction. Information from companies is the main input to our rating. The methodologies for calculating ESG indicators and our responsible investor and engagement policy are available on our website [by clicking here](#).

<sup>(1)</sup> The rating out of 10 integrates 4 risks of responsibility: shareholder, environmental, social and societal. Whatever their sector of activity, 24 indicators are evaluated, such as social climate, accounting risks, suppliers, business ethics, energy policy, quality of management.

<sup>(2)</sup> The ABA Matrix combines the Responsibility Risk and the Sustainable Transition exposure of the portfolio. It allows us to map companies to be mapped using a risk/opportunity approach.

<sup>(3)</sup> 1 No poverty. 2 Zero hunger. 3 Good health and well-being. 4 Quality education. 5 Gender equality. 6 Clean water and sanitation. 7 Clean and affordable energy. 8 Decent work and economic growth. 9 Industry, innovation and infrastructure. 10 Reduced inequalities. 11 Sustainable cities and communities. 12 Sustainable consumption and production. 13 Tackling climate change. 14 Aquatic life. 15 Terrestrial life. 16 Peace, justice and effective institutions. 17 Partnerships to achieve the goals.

<sup>(4)</sup> 5 transitions based on a long-term perspective of the financing of the economy allow the identification of activities with a positive contribution to sustainable development and to measure the exposure of companies in terms of turnover as well as exposure to the UN Sustainable Development Goals.

\*The coverage rate measures the proportion of issuers (equities and corporate bonds) taken into account in the calculation of the extra-financial indicators. This measure is calculated as a % of the net assets adjusted for cash, money market instruments, derivatives and any vehicle outside the scope of "listed equities and corporate bonds".

It should be noted that DNCA Finance changed its non-financial data provider in October 2023 from monitoring negative externalities by the Scope Rating provider to monitoring performance indicators (PAI) by the MSCI provider.

This change of supplier and indicator typology prevents DNCA Finance from producing a 3-year ESG performance comparison. DNCA Finance Committed to produce this historical data from the data available in December 2023.

This product promotes environmental or social characteristics, but does not have as its objective a sustainable investment. It might invest partially in assets that have a sustainable objective, for instance qualified as sustainable according to the EU classification.

This product is subject to sustainability risks as defined in the Regulation 2019/2088 (article 2(22)) by environmental, social or governance event or condition that, if it occurs, could cause an actual or a potential material negative impact on the value of the investment.

If the portfolio investment process can incorporate ESG approach, the portfolio's investment objective is not primarily to mitigate this risk. The sustainability risk management policy is available on the website of the Management Company.

The reference benchmark as defined in the Regulation 2019/2088 (article 2(22)) does not intend to be consistent with the environmental or social characteristics promoted by the fund.

## Glossary

**Beta.** Measures the average extent to which a fund moves relative to the broader market. The beta of a market is 1. A fund with a beta of more than 1 moves on average to a greater extent than the market. A fund with a beta of less than 1 moves on average to a lesser extent. If beta is a minus number, it is likely that the stock and the market move in opposite directions.

**Correlation coefficient.** The correlation coefficient is a measure of correlation. It is used to determine the relationship between two assets over a given period. A positive coefficient means that the two assets move in the same direction. Conversely, a negative coefficient means that the assets move in the opposite direction. The correlation or decorrelation can be more or less strong and varies between -1 and 1.

**Dividend yield.** Annual dividends per share / Price per share

**EV (Enterprise Value).** Market value of common stock + market value of preferred equity + market value of debt + minority interest - cash and investments.

**ND/EBITDA (Net Debt / EBITDA).** A measurement of leverage, calculated as a company's interest-bearing liabilities minus cash or cash equivalents, divided by its EBITDA. The net debt to EBITDA ratio is a debt ratio that shows how many years it would take for a company to pay back its debt if net debt and EBITDA are held constant.

**P/B.** The Price to Book Ratio is the ratio of the market value of equity (market capitalisation) to its book value. It is used to compare the market valuation of a company with its book value.

**P/CF (Share price/Cash Flow per Share).** The price-to-cash-flow ratio is an indicator of a stock's valuation.

**PER (Price Earnings Ratio).** A company's share price divided by the amount of profits it makes for each share in a 12-month period. PE ratios are normally calculated on the base of all the profit made in the period, whether or not the profit is paid out to shareholders in that period.

**ROE (Return On Equity).** The amount of net income returned as a percentage of shareholders equity. Return on equity measures a corporation's profitability by revealing how much profit a company generates with the money shareholders have invested.

**Sharpe Ratio.** A way of measuring the historical risk-adjusted return on an investment. It is the average previous return minus the risk-free return, divided by the standard deviation (a measure of risk that looks at the diversion of actual returns from expected returns).

**Sharpe Ratio.** The Sharpe ratio measures the excess return over the risk-free money rate of an asset portfolio divided by the standard deviation of that return. It is therefore a measure of the marginal return per unit of risk. It is used to measure the performance of managers with different risk policies.

**Tracking error.** Tracking Error is a measure of how closely an investment portfolio follows the index against which it is benchmarked. It is the difference in the return earned by a portfolio and the return earned by the benchmark against which the portfolio is constructed. For example, if a bond portfolio earns a return of 5.15% during a period when the portfolio's benchmark (say, for example, the Lehman Brothers Index) produces a return of 5.06%, the tracking error is .09%, or 9 basis points.
