

# DNCA INVEST SRI HIGH YIELD

INTERNATIONAL HIGH YIELD BONDS

## Investment objective

Through a discretionary strategy, the Sub-Fund seeks to benefit, throughout the recommended investment period of more than three years, from the performance of the euro-denominated high-yield bonds market, from issuers of the private sector. Investor's attention is drawn to the fact that the management style is discretionary and integrates environmental, social / societal and governance (ESG) criteria. The portfolio composition will not attempt to replicate the composition of a benchmark index from a geographical or sectorial perspective. Even so, the 50% Bloomberg Euro Corporate 500 - BBB index + 50% Bloomberg Euro High Yield BB Rating only composite index, may be used as ex-post benchmark indicator.

To achieve its investment objective, the investment strategy is based on active discretionary management.

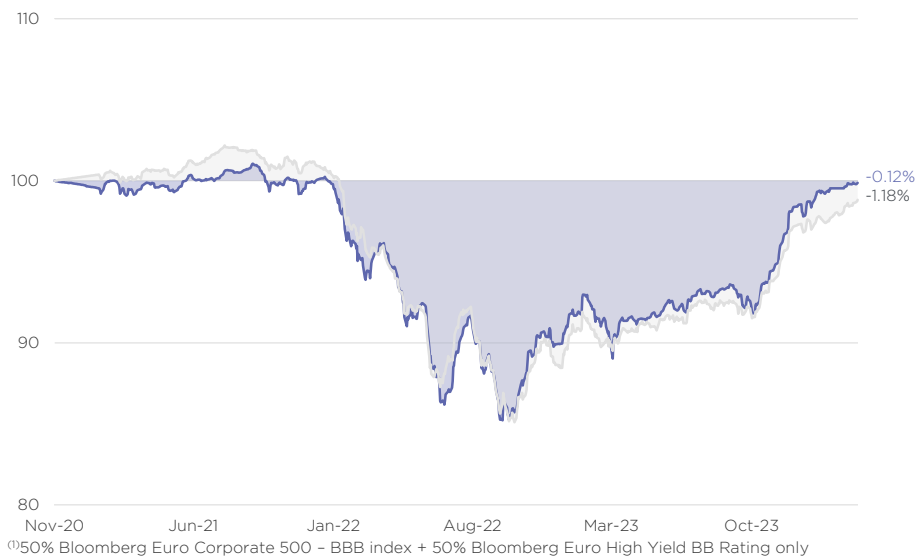

## Financial characteristics

NAV (€)	99.88
Net assets (€M)	105
Number of issuers	103

### Portfolio managers comments

March saw positive performances in 2024 on most markets. On the economic front, growth continued to prove resilient in the United States, while inflation stabilised at around 3%. After maintaining key interest rates, expectations of a rate cut are nonetheless confirmed for June, with the Fed favouring a recovery in growth and accommodating inflation above 2%. On the corporate front, results remain in line with expectations, notably the long-awaited results from Nvidia, which again confirm significant growth.

The credit market continues to enjoy strong appetite and remains guided by technical factors. It performed by +1.2% on the European and US investment grade side, +1.1% on the US high yield side and +0.6% on the euro high yield side, which lagged slightly behind. It continues to attract new investors: the investment grade market saw inflows of €3.4 billion in March, and €1.3 billion for high yield. This appetite is motivating companies to seek primary financing: €58bn were issued on the investment grade market and €17bn on the high yield market. The main reason remains refinancing. But the need for investment is reducing issue premiums to a minimum. However, during the month, specific events disrupted European high yield, particularly at the lower end of the ratings spectrum. Several debt restructurings were announced, the most resounding of which was that of SFR. Following the announcement of disappointing results for the fourth quarter of 2023, and despite planned sales of its media and tower activities, the operator launched a major debt reduction programme that would involve creditors. Senior 2027 bonds lost more than 17 points. Other issuers are also embarking on a process of restructuring their debt before the next maturity date. This is the case of Intrum, a Nordic debt collector that was only recently rated BB, and Ardagh, the Irish packaging multinational, which is suffering from a high level of debt in an unfavourable sector context. As a result of these events, the CCC index lost almost 4% over the month and the B index 0.5%, with spreads widening significantly (+65 bp and +43 bp respectively).

Against this backdrop, the DNCA Invest SRI High Yield fund recorded a performance of 0.34%, below that of its benchmark index of -63, due to its greater exposure to B ratings. The ratings that contributed most to performance were BB ratings, followed by BBB ratings. AT1s and hybrid debt also performed well.

In sector terms, the biggest contributors to performance are banking, automotive, telecoms, basic industries and retail. Those that contribute least are health, media, utilities, technology and consumer goods.

The biggest contributors to performance were Telefonica (telecoms), Progroup (capital goods), Intesa Sanpaolo (banking), TI Fluid (automotive) and ZF (automotive). The least significant contributors were Ardagh (capital goods), Grifols (healthcare), Monitchem (basic industries), Ardagh Metal Packaging (capital goods) and Catalent (capital goods). The portfolio had no exposure to SFR or the Altice complex.

During the month, we increased the portfolio's exposure to the market by investing more in CCCs (4%), some FRN bonds (4%) and sterling bonds (3%). At the same time, we reduced our exposure to senior and subordinated bank debt, which had already performed well, and our exposure to hybrid debt. We reduced our exposure to Telefonica after participating in its new issue, BBVA, Unicredit, Belden and Arkema. We increased our exposure to Progroup, Ardagh Metal Packaging, Monitchem, Accor via hybrid debt and United Group. At the end of the month, the portfolio was 52.1% BB and 5% cash. We also cut our interest-rate hedge, increasing the duration to 2.9. We remain confident in the credit market, which still offers an attractive yield in the current environment. It should benefit from resilient growth and the recovery in certain sectors (chemicals, packaging) affected by destocking in 2023. However, strong selectivity among issuers remains crucial. If interest rates do fall, this should bolster the performance of the highest-rated issuers. Last but not least, technical factors remain favourable, with inflows and limited primary refinancing. The portfolio has a yield of 5.9% for a duration of 2.9.

## Internal extra-financial analysis

### ABA coverage rate<sup>+</sup> (87.1%)

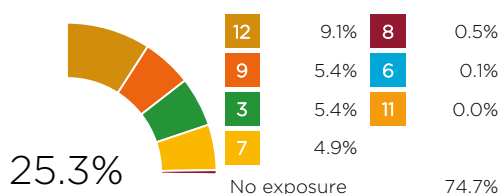

Average Responsibility Score: 4.8/10

### Responsibility risk breakdown<sup>(1)</sup>

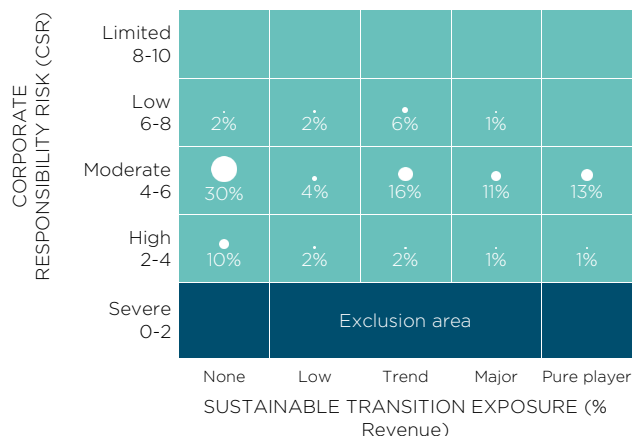

### SDG's exposure<sup>(3)</sup> (% of revenues)

### Selectivity universe exclusion rate

### Transition/CSR exposure<sup>(2)</sup>

### Sustainable transitions exposure<sup>(4)</sup>

## Analysis methodology

We develop proprietary models based on our expertise and conviction to add tangible value in the selection of portfolio securities. DNCA's ESG analysis model, Above & Beyond Analysis (ABA), respects this principle and offers a rating that we control the entire construction. Information from companies is the main input to our rating. The methodologies for calculating ESG indicators and our responsible investor and engagement policy are available on our website [by clicking here](#).

<sup>(1)</sup> The rating out of 10 integrates 4 risks of responsibility: shareholder, environmental, social and societal. Whatever their sector of activity, 24 indicators are evaluated, such as social climate, accounting risks, suppliers, business ethics, energy policy, quality of management.

<sup>(2)</sup> The ABA Matrix combines the Responsibility Risk and the Sustainable Transition exposure of the portfolio. It allows us to map companies to be mapped using a risk/opportunity approach.

<sup>(3)</sup> 1 No poverty. 2 Zero hunger. 3 Good health and well-being. 4 Quality education. 5 Gender equality. 6 Clean water and sanitation. 7 Clean and affordable energy. 8 Decent work and economic growth. 9 Industry, innovation and infrastructure. 10 Reduced inequalities. 11 Sustainable cities and communities. 12 Sustainable consumption and production. 13 Tackling climate change. 14 Aquatic life. 15 Terrestrial life. 16 Peace, justice and effective institutions. 17 Partnerships to achieve the goals.

<sup>(4)</sup> 5 transitions based on a long-term perspective of the financing of the economy allow the identification of activities with a positive contribution to sustainable development and to measure the exposure of companies in terms of turnover as well as exposure to the UN Sustainable Development Goals.

\*The coverage rate measures the proportion of issuers (equities and corporate bonds) taken into account in the calculation of the extra-financial indicators. This measure is calculated as a % of the fund's net assets adjusted for cash, money market instruments, derivatives and any vehicle outside the scope of "listed equities and corporate bonds".

This product promotes environmental or social characteristics, but does not have as its objective a sustainable investment. It might invest partially in assets that have a sustainable objective, for instance qualified as sustainable according to the EU classification.

This product is subject to sustainability risks as defined in the Regulation 2019/2088 (article 2(22)) by environmental, social or governance event or condition that, if it occurs, could cause an actual or a potential material negative impact on the value of the investment.

If the portfolio investment process can incorporate ESG approach, the portfolio's investment objective is not primarily to mitigate this risk. The sustainability risk management policy is available on the website of the Management Company.

The reference benchmark as defined in the Regulation 2019/2088 (article 2(22)) does not intend to be consistent with the environmental or social characteristics promoted by the fund.

## Glossary

**Beta.** Measures the average extent to which a fund moves relative to the broader market. The beta of a market is 1. A fund with a beta of more than 1 moves on average to a greater extent than the market. A fund with a beta of less than 1 moves on average to a lesser extent. If beta is a minus number, it is likely that the stock and the market move in opposite directions.

**Correlation coefficient.** The correlation coefficient is a measure of correlation. It is used to determine the relationship between two assets over a given period. A positive coefficient means that the two assets move in the same direction. Conversely, a negative coefficient means that the assets move in the opposite direction. The correlation or decorrelation can be more or less strong and varies between -1 and 1.

**Sharpe Ratio.** The Sharpe ratio measures the excess return over the risk-free money rate of an asset portfolio divided by the standard deviation of that return. It is therefore a measure of the marginal return per unit of risk. It is used to measure the performance of managers with different risk policies.

**Sharpe Ratio.** A way of measuring the historical risk-adjusted return on an investment. It is the average previous return minus the risk-free return, divided by the standard deviation (a measure of risk that looks at the diversion of actual returns from expected returns).

**Tracking error.** Tracking Error is a measure of how closely an investment portfolio follows the index against which it is benchmarked. It is the difference in the return earned by a portfolio and the return earned by the benchmark against which the portfolio is constructed. For example, if a bond portfolio earns a return of 5.15% during a period when the portfolio's benchmark (say, for example, the Lehman Brothers Index) produces a return of 5.06%, the tracking error is .09%, or 9 basis points.
