DNCA INVEST SRI EUROPE GROWTH

EUROPEAN GROWTH EQUITIES

Investment objective

The Sub-Fund's objective is to outperform Pan-European equity markets over the recommended investment period (5 years). The STOXX EUROPE 600 Net Return EUR reference indicator, calculated with dividends reinvested, is provided for a posteriori comparison purposes. Investors' attention is drawn to the fact that the management style is discretionary and integrates environmental, social / societal and governance (ESG) criteria.

To achieve its investment objective, the investment strategy is based on active discretionary management.

DNCA INVEST SRI EUROPE GROWTH EUROPEAN GROWTH EQUITIES

Portfolio managers comments

Once again, there was a flurry of news from the White House, alternating between reassuring announcements on trade and geopolitical issues, and anxiety-provoking ones (or vice versa). Visibility remains particularly poor, and a logical waitand-see attitude is insidiously taking hold among economic agents in the USA. Concerns are emerging about the sustainability of US public deficits, and more generally about the attractiveness of long-dated US bonds, which explains why 30-year yields are once again close to 5%.

At the same time, talks on a possible ceasefire between Russia and Ukraine are at a standstill, demonstrating President Trump's impotence. The Nato summit scheduled for the end of June will probably be accompanied by a significant increase in member spending towards 3.5% of GDP, with a peak of 5% for certain countries close to Europe's eastern border. The defense sector therefore continued its ascent, but we initiated profit-taking, after some spectacular stock market performances.

As expected, Novo Nordisk has revised its 2025 organic growth target downwards (from +16-24% to +13-21%), due to lower growth in the USA under pressure from Wegovy's compounding drugs, which have been banned from sale since May 22. On the other hand, we had not anticipated the forced departure of the CEO, initiated at the request of the main shareholder, the Novo Holding foundation. The Danish group has clearly underperformed in many areas (R&D, communication, production, US market share) compared with its major American competitor Lilly. A change of leadership is understandable. At the same time, the Group has announced a raft of partnerships with mutual insurance companies and distributors to revitalize prescriptions. In the short term, we will have full data on the latest Cagrisema clinical trial at the American Diabetes Association meeting at the end of June.

Also in Denmark, the world leader in enzymes and probiotics, Novonesis (from the merger of Chr Hansen and Novozymes), reported a very solid Q1 with organic growth of +11%. We were satisfied with all our geographies and divisions. Innovation, size and regulatory changes are structural factors of outperformance. Margins are high and cash flow generation abundant. We may raise our 2025 targets at the half-yearly results.

Amplifon, the world's leading distributor of hearing aids, has released rather mixed figures for the first quarter (disappointing growth, but encouraging margins). However, the Group confirmed that the French market rebounded in the 2nd quarter. After two mediocre years, Europe could therefore return to growth, and thus finally support the Group's margins, which have suffered significantly due to this geography.

Despite a still-anemic European economy, Swiss sanitaryware leader Geberit has reported above-expectation organic growth of +5%, after several lean years. The company is 90% exposed to Europe, and in particular to the DACH zone (Germany, Austria, Switzerland). Lower short-term interest rates and the prospect of a stimulus plan in Germany explain a slight improvement in order intake.

Last but not least, the Italian groups Lottomatica and Carel gave us good results. The former, N°1 in Italy for physical and online games, posted very strong growth (+33%) thanks to recurring gains in market share, and admittedly, an easy basis for comparison. As for Carel, even if Q1 wasn't mind-blowing, the forecast for Q2 is far more enthusiastic, with growth expected to be between +8 and +12%), and order intake in the European refrigeration sector is finally picking up again.

On the other hand, Merck disappointed us once again, with a downward revision of its annual targets. The position has been sold in full

Analysis methodology

We develop proprietary models based on our expertise and conviction to add tangible value in the selection of portfolio securities. DNCA's ESG analysis model, Above & Beyond Analysis (ABA), respects this principle and offers a rating that we control the entire construction. Information from companies is the main input to our rating. The methodologies for calculating ESG indicators and our responsible investor and engagement policy are available on our website <u>by clicking here</u>.

⁽¹⁾ The rating out of 10 integrates 4 risks of responsibility: shareholder, environmental, social and societal. Whatever their sector of activity, 24 indicators are evaluated, such as social climate, accounting risks, suppliers, business ethics, energy policy, quality of management.

⁽²⁾ The ABA Matrix combines the Responsibility Risk and the Sustainable Transition exposure of the portfolio. It allows us to It allows companies to be mapped using a risk/opportunity approach.

⁽³⁾ 1 No poverty. 2 Zero hunger. 3 Good health and well-being. 4 Quality education. 5 Gender equality. 5 Clean water and sanitation.
⁷ Clean and affordable energy. 6 Decent work and economic growth. 9 Industry, innovation and infrastructure. 10 Reduced inequalities.
¹⁰ Sustainable cities and communities. 2 Sustainable consumption and production. 18 Tackling climate change. 4 Aquatic life. 16 Peace, justice and effective institutions. 17 Partnerships to achieve the goals.

⁽⁴⁾ 5 transitions based on a long-term perspective of the financing of the economy allow the identification of activities with a positive contribution to sustainable development and to measure the exposure of companies in terms of turnover as well as exposure to the UN Sustainable Development Goals.

^{*}The coverage rate measures the proportion of issuers (equities and corporate bonds) taken into account in the calculation of the extra-financial indicators. This measure is calculated as a % of the net assets adjusted for cash, money market instruments, derivatives and any vehicle outside the scope of "listed equities and corporate bonds".

It should be noted that DNCA Finance changed its non-financial data provider in October 2023 from monitoring negative externalities by the Scope Rating provider to monitoring performance indicators (PAI) by the MSCI provider.

This change of supplier and indicator typology prevents DNCA Finance from producing a 3-year ESG performance comparison. DNCA Finance Committed to produce this historical data from the data available in December 2023.

This product promotes environmental or social characteristics, but does not have as its objective a sustainable investment. It might invest partially in assets that have a sustainable objective, for instance qualified as sustainable according to the EU classification.

This product is subject to sustainability risks as defined in the Regulation 2019/2088 (article 2(22)) by environmental, social or governance event or condition that, if it occurs, could cause an actual or a potential material negative impact on the value of the investment.

If the portfolio investment process can incorporate ESG approach, the portfolio's investment objective is not primarily to mitigate this risk. The sustainability risk management policy is available on the website of the Management Company.

The reference benchmark as defined in the Regulation 2019/2088 (article 2(22)) does not intend to be consistent with the environmental or social characteristics promoted by the fund.

EUROPEAN GROWTH EQUITIES

Glossary

Beta. Measures the average extent to which a fund moves relative to the broader market. The beta of a market is 1. A fund with a beta of more than 1 moves on average to a greater extent than the market. A fund with a beta of less than 1 moves on average to a lesser extent. If beta is a minus number, it is likely that the stock and the market move in opposite directions

Correlation coefficient. The correlation coefficient is a measure of correlation. It is used to determine the relationship between two assets over a given period. A positive coefficient means that the two assets move in the same direction. Conversely, a negative coefficient means that the assets move in the opposite direction. The correlation or decorrelation can Dividend yield. Annual dividends per share / Price per share EV (Enterprise Value). Market value of common stock + market value of preferred equity + market value of debt + minority interest - cash and investments.

ND/EBITDA (Net Debt / EBITDA). A measurement of leverage, calculated as a company's interest-bearing liabilities minus cash or cash equivalents, divided by its EBITDA. The net debt to EBITDA ratio is a debt ratio that shows how many years it would take for a company to pay back its debt if net debt and EBITDA are held constant.

P/B. The Price to Book Ratio is the ratio of the market value of equity (market capitalisation) to its book value. It is used to compare the market valuation of a company with its book value.

P/CF (Share price/Cash Flow per Share). The price-to-cash-flow ratio is an indicator of a stock's valuation.

PER (Price Earnings Ratio). A company's share price divided by the amount of profits it makes for each share in a 12-month period. PE ratios are normally calculated on the base of all the profit made in the period, whether or not the profit is paid out to shareholders in that period.

ROE (Return On Equity). The amount of net income returned as a percentage of shareholders equity. Return on equity measures a corporation's profitability by revealing how much profit a company generates with the money shareholders have invested. Sharpe Ratio. A way of measuring the historical risk-adjusted return on an investment. It is the average previous return minus the risk-free return, divided by the standard deviation (a measure of risk that looks at the diversion of actual returns from expected returns).

Sharpe Ratio. The Sharpe ratio measures the excess return over the risk-free money rate of an asset portfolio divided by the standard deviation of that return. It is therefore a measure of the marginal return per unit of risk. It is used to measure the performance of managers with different risk policies.

Tracking error. Tracking Error is a measure of how closely an investment portfolio follows the index against which it is benchmarked. It is the difference in the return earned by a portfolio and the return earned by the benchmark against which the portfolio is constructed. For example, if a bond portfolio earns a return of 5.15% during a period when the portfolio's benchmark (say, for example, the Lehman Brothers Index) produces a return of 5.06%, the tracking error is .09%, or 9 basis points.
