

DNCA SÉRÉNITÉ PLUS

SHORT-TERM EUROZONE BONDS

Investment objective

The Fund's objective is to seek to outperform the Bloomberg Euro Aggregate 1-3 year bond benchmark (Bloomberg ticker: LE13TREU Index) calculated with coupons reinvested over the recommended investment horizon (18 months). Investors' attention is drawn to the fact that the management is discretionary and integrates environmental, social/societal and governance (ESG) criteria.

To achieve its investment objective, the investment strategy is based on active discretionary management.

Portfolio managers comments

The markets are easing further after a very turbulent April. Although still closely followed, D. Trump's announcements are having less and less impact. The EURO STOXX 50 NR is back to its pre-April 2 levels, or "Liberation Day" in the United States. The index rose by 5.4% over the month. In its wake, credit rose by +0.5% and +1.4% respectively in the investment-grade and high-yield segments, and the short-term bond index by +0.15%.

DNCA Sérénité Plus continued its good momentum over the month (+ 0.32%), reaching+ 1.58% since the beginning of the year.

Within the portfolio, Abertis, Iberdrola, Rabobank and British Telecom are exercising the early redemption option on their hybrid debt, as expected. For valuation reasons, the Ethias 1/26 line has been sold, while the AT1s in the Intesa and Commerzbank portfolios have been reinforced. Sabadell is back in the portfolio via an AT1 and a Tier 2 with a call of less than one year, with both bonds offering a strong incentive for the issuer to redeem early. The primary market offers good investment-grade opportunities with longer maturities: Lundbeck 4 years, Equinix 4 years, RCI Banque 5 years, Piraeus Bank 3.5 years and Transdev 3 years. Following the market's return to less comfortable valuation levels, the government bond component was strengthened by the purchase of Spain 10/2030. Lastly, the high-yielding, high-quality companies SNF, IQVIA, Loxam and Wizz Air have been reinforced, as have the hybrids EDF and Veolia Environnement.

Duration was increased by all these operations and by the strengthening of the derivative position on 5-year Germany, reaching 1.5 at the end of the month.

The extra-financial characteristics of the portfolio show a responsibility performance of /responsability_score and a sustainable transition exposure of 82.06%.

The markets have regained all their optimism - and valuation - from before D. Trump's massive announcements. However, it's hard to imagine that the customs measures already underway, the ongoing threats and, above all, the widespread uncertainty will not have an impact on the global economy. We prefer to maintain a cautious approach to management, with low overall credit risk and sensitivity revised upwards. In this way, our ability to intervene should the markets react in the coming weeks remains intact.

Sustainable transitions exposure⁽⁴⁾

Analysis methodology

We develop proprietary models based on our expertise and conviction to add tangible value in the selection of portfolio securities. DNCA's ESG analysis model, Above & Beyond Analysis (ABA), respects this principle and offers a rating that we control the entire construction. Information from companies is the main input to our rating. The methodologies for calculating ESG indicators and our responsible investor and engagement policy are available on our website [by clicking here](#).

⁽¹⁾ The rating out of 10 integrates 4 risks of responsibility: shareholder, environmental, social and societal. Whatever their sector of activity, 24 indicators are evaluated, such as social climate, accounting risks, suppliers, business ethics, energy policy, quality of management.

⁽²⁾ The ABA Matrix combines the Responsibility Risk and the Sustainable Transition exposure of the portfolio. It allows us to map companies to be mapped using a risk/opportunity approach.

⁽³⁾ 1 No poverty. 2 Zero hunger. 3 Good health and well-being. 4 Quality education. 5 Gender equality. 6 Clean water and sanitation. 7 Clean and affordable energy. 8 Decent work and economic growth. 9 Industry, innovation and infrastructure. 10 Reduced inequalities. 11 Sustainable cities and communities. 12 Sustainable consumption and production. 13 Tackling climate change. 14 Aquatic life. 15 Terrestrial life. 16 Peace, justice and effective institutions. 17 Partnerships to achieve the goals.

⁽⁴⁾ 5 transitions based on a long-term perspective of the financing of the economy allow the identification of activities with a positive contribution to sustainable development and to measure the exposure of companies in terms of turnover as well as exposure to the UN Sustainable Development Goals.

*The coverage rate measures the proportion of issuers (equities and corporate bonds) taken into account in the calculation of the extra-financial indicators. This measure is calculated as a % of the net assets adjusted for cash, money market instruments, derivatives and any vehicle outside the scope of "listed equities and corporate bonds".

It should be noted that DNCA Finance changed its non-financial data provider in October 2023 from monitoring negative externalities by the Scope Rating provider to monitoring performance indicators (PAI) by the MSCI provider. This change of supplier and indicator typology prevents DNCA Finance from producing a 3-year ESG performance comparison. DNCA Finance Committed to produce this historical data from the data available in December 2023.

A summary of investors' rights is available in English at the following link: <https://www.dnca-investments.com/en/regulatory-information>

This product promotes environmental or social characteristics, but does not have as its objective a sustainable investment. It might invest partially in assets that have a sustainable objective, for instance qualified as sustainable according to the EU classification.

This product is subject to sustainability risks as defined in the Regulation 2019/2088 (article 2(22)) by environmental, social or governance event or condition that, if it occurs, could cause an actual or a potential material negative impact on the value of the investment.

If the portfolio investment process can incorporate ESG approach, the portfolio's investment objective is not primarily to mitigate this risk. The sustainability risk management policy is available on the website of the Management Company.

The reference benchmark as defined in the Regulation 2019/2088 (article 2(22)) does not intend to be consistent with the environmental or social characteristics promoted by the fund.

Glossary

Beta. Measures the average extent to which a fund moves relative to the broader market. The beta of a market is 1. A fund with a beta of more than 1 moves on average to a greater extent than the market. A fund with a beta of less than 1 moves on average to a lesser extent. If beta is a minus number, it is likely that the stock and the market move in opposite directions.

Correlation coefficient. The correlation coefficient is a measure of correlation. It is used to determine the relationship between two assets over a given period. A positive coefficient means that the two assets move in the same direction. Conversely, a negative coefficient means that the assets move in the opposite direction. The correlation or decorrelation can be more or less strong and varies between -1 and 1.

Sharpe Ratio. The Sharpe ratio measures the excess return over the risk-free money rate of an asset portfolio divided by the standard deviation of that return. It is therefore a measure of the marginal return per unit of risk. It is used to measure the performance of managers with different risk policies.

Sharpe Ratio. A way of measuring the historical risk-adjusted return on an investment. It is the average previous return minus the risk-free return, divided by the standard deviation (a measure of risk that looks at the diversion of actual returns from expected returns).

Tracking error. Tracking Error is a measure of how closely an investment portfolio follows the index against which it is benchmarked. It is the difference in the return earned by a portfolio and the return earned by the benchmark against which the portfolio is constructed. For example, if a bond portfolio earns a return of 5.15% during a period when the portfolio's benchmark (say, for example, the Lehman Brothers Index) produces a return of 5.06%, the tracking error is .09%, or 9 basis points.

Additional notes
