

Management Report November 2019

Share D: ISIN code FR0007056072 - Ticker Bloomberg DNCAPEA FP

Share class created the **07 November 2003**

Data as of 29/11/2019

INVESTMENT OBJECTIVE

The fund seek to outperform the SBF 120, calculated with dividends reinvested, over the recommended investment period (5 years).

PORTFOLIO MANAGERS COMMENTS

Vigorous momentum on French equities indexes continued during October (SBF120 +2.8%, CAC M&S +2.7%) in a context of stable interest rates in Europe. This increase came against a backdrop of progress in the trade agreement between the US and China, while the risk of a hard Brexit seems to be fading according to the latest surveys. Manufacturing PMIs seem to have reached a low point (44.1 in November vs. 43.8 in October in Germany) and are beginning to pick up. Maintaining favorable macroeconomic conditions seems to rely on the healthy state of the consumption environment, which has so far made up for manufacturing weakness, pending a more significant rebound in manufacturing as geopolitical uncertainty is reabsorbed.

YTD stood at +10.08%. performance +perf_YTD_bench for the SBF120 dividends reinvested. During November, the fund was up +2.11%, underperforming by /superformance_1Mbp. The main contributors to the fund's monthly performance were Sopra Steria, Credit Agricole, BNP Paribas, Societe Generale and Elis. In contrast, the fund suffered from its exposure to Renault, Bouygues, Soitec, Spie and TF1. During the month, we removed Fermentalg and Fleury Michon from our selection, while lines in Bureau Veritas, Sacyr and d'leteren were opened. Gallica presents an average 2019 net yield of 3.98% for 2020 P/E of 10.43x and prospective growth in 2020 earnings of 9.3%.

Macroeconomic conditions seem to favor ongoing momentum for equities markets in 2020: beneficial monetary policies, easing in geopolitical uncertainty, EPS growth set to be positive (around 8% estimated). This latter more hazardous component is where doubts seem to lie given that downward revisions have been seen in the majority of fiscal years since 2010. However, given the level of multiples (P/E 14x/15x according to estimates for the Stoxx600), the risk-reward profile seems to favor equities whereas more defensive assets (bonds especially) seem to offer no further potential after the levels reached. A reversal in flow momentum in favor of equities could also strengthen this trend after more than a year of outflows.
